PART ONE

Before categorizing someone as treatment-resistant

1 Introduction	1
Overview	1
Definitions	2
Measurement tools	5
Remission	9
Recovery	9
Summary	10
References	11
2 A general treatment approach	13
Using the rubric of evidence-based medicine	13
The therapeutic alliance	14
Identifying obstacles	16
Summary	17
References	18
3 Adherence – the great masquerader of treatment-resistance	19
What is adherence and how common is partial or nonadherence?	19
Clinical correlates for people at risk for partial or nonadherence	20
Interview style	23
Interventions targeting nonadherence	23
Monitoring adherence	24
Alternate medication formulations	24
Summary	25
References	25

4 Dosing of antipsychotics – what evidence do we use?	29
Practice-based evidence	29
Research-based evidence	30
Reconciling doses used in clinical practice with those supported by clinical research	32
Summary	32
References	33
PART TWO	
Management approaches	
5 Psychopharmacological approaches	37
Overview	37
Heterogeneity of antipsychotics	37
Evidence base for antipsychotic monotherapies	38
Evidence base for antipsychotic combination therapy	44
Evidence base for adjunctive nonantipsychotic medications	47
Summary	51
References	51
6 Somatic treatments	57
Summary	59
References	59
7 Nonpharmacological approaches	61
Cognitive behavioral therapy and cognitive remediation	61
Psychosocial rehabilitation, vocational rehabilitation, and supported employment	62
Other approaches	63
Summary	64
References	64
8 Conclusions	65
