

Contents

1	Emotions and Cognition: From Myth and Philosophy to Modern Psychology and Neuroscience	1
1.1	Reason and Emotions as Polarity.....	1
1.2	Plato and the Idealization of Rationality.....	3
1.3	The Deconstruction of the Myth of Rationality.....	3
1.4	Darwin's Upgrading of the Organic and Emotions.....	4
1.5	Emotion Theories After Darwin	5
1.6	Freud and the Unconscious.....	6
1.7	Erik Erikson's Psychosocial Stages of Life	8
1.8	Piaget's Theory of Assimilation and Accommodation	9
1.9	Emotions as Ancestral Equilibrium Systems: Neurobiological Views.....	9
	References.....	15
2	Equilibrium and Disequilibrium in Development	17
2.1	Introduction.....	17
2.2	Homeostasis/Equilibrium and Tension Reduction.....	18
2.3	Equilibrium and Tension Amplification.....	20
2.4	Disequilibrium and Reorganization in Development: A Cognitive View.....	21
2.5	Disequilibrium and Reorganization in Development: Neurobiological Mechanisms	25
	References.....	27
3	Expansion and Reorganization in Development: Neurobiological Mechanisms	29
3.1	Building the Brain Through Experience	29
3.2	The Brain and Neurons	30
3.3	Neuronal Transmission: Resting Potentials and Action Potentials	31
3.4	Neurotransmitters and Neurotransmission.....	32
3.5	Synaptic Plasticity.....	34

3.6	Tension Levels and the HPA Axis.....	37
3.7	Stress as a Source of Adaptive Change.....	39
	References.....	43
4	Cognitive–Emotional Development in Infants	45
4.1	Emotion–Cognition Relations in Development: Piaget’s View.....	45
4.2	Early Emotional Development and the Psychosocial Context: Erikson’s View	48
4.3	Emotions in Infant Development	48
4.4	Sroufe’s Research on the Organization of Emotions in the Early Years	50
4.5	The Relational Context of Early Development and the Infant Brain	54
	References.....	64
5	Cognitive–Emotional Development in Childhood.....	67
5.1	Thinking About Thinking: The Toddler’s Growing Cognitive Repertoire and Its Significance for Emotional Development.....	68
5.2	Language and Emotion	69
	References.....	86
6	Cognitive–Emotional Development from Adolescence to Adulthood	89
6.1	Piaget on Adolescence and Formal Operations: “Thinking Takes Wings”	89
6.2	Limits of Adolescent Thought	91
6.3	Integrating Cognition and Emotion in Adolescence	92
6.4	Threats to Adolescent Development	94
6.5	Depression and Gender	95
6.6	Beyond Formal Operations: The Integration of Emotion and Cognition in Adolescence and Adulthood	97
6.7	Post-formal Thinking and Emotions from Preadolescence to Late Adulthood	101
6.8	Regulation Levels and Age	106
6.9	Variations in Integration and Their Causes	109
6.10	The Genesis of “Functional Amnesic States” in the Course of Development	111
	References.....	113
7	Emotion–Cognition Relations in Aging.....	117
7.1	The Why, How, and When of Aging and Its Optimization.....	117
7.2	Cognition and the Brain in Later Life.....	119
7.3	Consequences of Later Life Brain Changes for Emotion–Cognition Relations	123

7.4 Advantages and Disadvantages of Increasing Automaticity and Crystallization of Knowledge in Aging	125
7.5 Declines in Fluid Abilities and Emotion Processing in Later Life	126
7.6 Selected Empirical Findings: Later Life and the Integration of Emotional Knowledge	130
7.6.1 Affect Complexity Decreases from Middle to Late Adulthood.....	131
7.6.2 Symbolic Processing Is at Its Height in Later Life	132
7.6.3 Older Adults' Information Processing Is Dependent on the Presence of Emotional Integration	133
7.6.4 High Activation Is More Problematic for Older Adults.....	134
7.6.5 High Arousal Information Is Judged More Negatively by Elders	134
7.6.6 High Arousal + Reduced Resources Disrupt Information Processing in Elderly.....	135
7.6.7 Polarization and Stereotypical Thinking Is Increased in Some Older Adults.....	136
7.6.8 Persons Under High Activation, Especially Elders, Are More Susceptible to Stereotypes	136
7.6.9 Preexisting Regulation Difficulties Affect Performance of Elders More Strongly	137
7.6.10 Stronger Physiological Reactivity to High Stress Situations	137
