About the Author	ix
Preface	xi
1 The Tenacity of Addiction	1
<i>Introduction and Overview</i>	1
<i>Discovering Cognition</i>	5
<i>Implicit Cognition and Addiction</i>	6
<i>Neuropsychological Findings</i>	9
<i>Addictive Behaviour is Primary, Not Compensatory</i>	11
<i>Changing Habits is the Priority</i>	14
<i>Diagnostic Criteria</i>	15
<i>Towards Integration</i>	15
<i>Equivocal Findings from Research Trials</i>	16
<i>Time for CHANGE</i>	16
<i>Evolution, Not Revolution</i>	17
<i>Something Old, Something New</i>	18
2 Existing Cognitive Behavioural Accounts of Addiction and Substance Misuse	21
<i>The Evidential Basis of CBT for Addiction</i>	23
<i>Meta-analytic Findings</i>	23
<i>Behavioural Approaches</i>	24
<i>Diverse Treatments Mostly Deliver Equivalent Outcomes</i>	25
<i>What Are the Mechanisms of Change?</i>	26
<i>The Missing Variable?</i>	27
<i>A Dual-Processing Framework</i>	28
3 Core Motivational Processes in Addiction	33
<i>Is Addiction About Avoiding Pain or Seeking Reward?</i>	33
<i>How Formulation Can Go Astray</i>	34
<i>Incentive Theories of Addiction</i>	35
<i>Learning Mechanisms in Addiction</i>	36

	<i>Distorted Motivation and Aberrant Learning: the Emergence of Compulsion</i>	41
	<i>'Wanting and Liking' in the Clinic</i>	41
	<i>The Role of Secondary Reinforcers</i>	43
	<i>Beyond Pleasure and Pain: a Psychoanalytic Perspective</i>	43
	<i>Conclusion</i>	44
4	A Cognitive Approach to Understanding the Compulsive Nature of Addiction	45
	<i>Theories of Attention</i>	46
	<i>Top-Down Influences Can Be Automatic</i>	47
	<i>Automatic Processes Can Be Practically Limitless</i>	48
	<i>Motivationally Relevant Cues are Prioritized</i>	48
	<i>Biased Competition</i>	50
	<i>Attention and Volition</i>	51
	<i>Appetitive Cues Usually Win</i>	52
	<i>Purposeful Behaviour Can Occur in the Absence of Consciousness</i>	53
	<i>Attentional Bias and Craving</i>	54
	<i>Cognitive Cycle of Preoccupation</i>	56
5	Vulnerability Factors In Addiction	63
	<i>Individual Differences in Addiction Liability</i>	63
	<i>Personality Traits</i>	63
	<i>The 'Big Five' Personality Factors</i>	65
	<i>Personality Disorders</i>	66
	<i>Affective Vulnerability Factors</i>	67
	<i>Brain-Derived Neurotrophic Factors</i>	69
	<i>Neurocognitive Vulnerability</i>	70
	<i>Findings from the Addiction Clinic</i>	71
	<i>From Research to Practice</i>	72
6	Motivation and Engagement	75
	<i>Impaired Insight and the Therapeutic Relationship</i>	75
	<i>The Sad Case of Julia</i>	80
	<i>Conflicted Motivation is the Key</i>	81
	<i>Goal Setting and Maintenance</i>	82
	<i>The Importance of Between-Session Change</i>	83
	<i>Neurocognitive Perspectives on Motivation</i>	83
	<i>Motivational Interviewing in Practice</i>	84
	<i>Formulating and Planning the Intervention</i>	88
	<i>Attributional Biases: the Blame Game</i>	90
	<i>Case Formulation</i>	91
	<i>Summary</i>	97

7	Managing Impulses	99
	<i>Introduction and Overview</i>	99
	<i>Structuring the Session</i>	99
	<i>Building Resilience</i>	100
	<i>Impulse Control</i>	102
	<i>Craving and Urge Report</i>	103
	<i>Cognitive Processing and Craving</i>	104
	<i>Cognitive Bias Modification</i>	105
	<i>Attentional Bias in the Context of Addiction</i>	106
	<i>The Alcohol Attention-Control Training Programme</i>	108
	<i>Modifying Implicit Approach Tendencies</i>	110
	<i>Reversing the Bias: Conclusion</i>	112
	<i>Brain Training and Neurocognitive Rehabilitation Approaches</i>	112
	<i>Clinical Implications of Delayed Reward Discounting</i>	117
	<i>Tried and Tested Techniques</i>	119
	<i>The Road to Recovery is Paved with Good Implementation Intentions!</i>	125
	<i>Neurophysiological Techniques</i>	129
	<i>Neuropsychopharmacological Approaches</i>	130
8	Managing Mood	135
	<i>The Reciprocal Relationship Between Mood and Addiction</i>	135
	<i>Pre-existing Vulnerability to Emotional Distress</i>	137
	<i>Negative Affect Due To Drug Effects</i>	141
	<i>Stepped Care for Addiction</i>	145
	<i>An Integrated Approach to Addressing Negative Emotion</i>	147
9	Maintaining Change	155
	<i>Relapse Prevention Strategies from a Neurocognitive Perspective</i>	155
	<i>The Importance of Goal Maintenance in the Long Term</i>	158
	<i>A Neurocognitive Perspective on Relapse</i>	159
	<i>Twelve-Step Facilitation Therapy</i>	161
	<i>Implicit Denial</i>	162
10	Future Directions	171
	<i>Neurocognitive Therapy</i>	171
	<i>Increasing Cognitive Control is the Goal</i>	172
	<i>Do We Know Anything New?</i>	173
	Appendix Self-Help Guide Six Tips – a Pocket Guide	
	to Preventing Relapse	179
	<i>Introduction: Why Six Tips?</i>	179
	<i>1. Don't Always Trust Your Memory!</i>	180
	<i>2. Beware of the 'Booze Bias'!</i>	180

3. <i>Separate Thoughts from Actions</i>	181
4. <i>Learn How to Distract Yourself</i>	181
5. <i>Willpower Is Sometimes Not Enough</i>	182
6. <i>Beware of the Dog that Doesn't Bark. . .</i>	182
