Contents

1 Introduction to the Freezing Process 1

2 Heat Transfer Coefficient and Physical Properties 5
2.1 Introduction 5
2.2 Heat Transfer Coefficient 5
2.3 Density 6
2.4 Calorimetric Properties 8
2.4.1 Freezing Point 8
2.4.2 Bound Water 10
2.4.3 Frozen Fraction 11
2.4.4 Enthalpy 13
2.4.5 Sensible Specific Heat 15
2.4.6 Apparent Specific Heat 16
2.4.7 Calorimetric Properties at High Pressure 17
2.5 Thermal Conductivity 18
2.6 Thermal Properties of Tylose Gel 22
2.7 Summary and Recommendations 23
CAUTION 24

3 Analytical Solutions 25
3.1 The Heat Conduction Equation 25
3.2 Analytical Solutions for Freezing Time 26
3.2.1 Solution for Zero Internal Resistance 27
3.2.2 Solution for Zero Sensible Heat: Plank's Equation 27
3.2.3 The Biot Number 29
3.2.4 Shape Factors for Zero Sensible Heat in Two and Three Dimensions 30
3.2.5 Exact Analytical Solutions for Freezing with Sensible Heat 32
3.2.6 Perturbation Solutions for Freezing with Sensible Heat 35
3.3 Summary and Recommendations 35
CAUTION 36

4 Approximate and Empirical Methods 37
4.1 Introduction 37
4.2 Freezing Time of 1-D Shapes 37
4.2.1 Cleland & Earle's Empirical Method 37
4.2.2 Mascheroni & Calvelo's Approximate Method 38
4.2.3 Pham's Method 1 (1984) 39
4.2.4 Pham's Method 2 (1986) 40
4.2.5 Salvadori & Mascheroni's Method 41
4.2.6 Improved Shape Factors for Basic Geometries 42
4.2.7 Comparison of Approximate and Empirical Freezing Time Prediction Methods in 1-D 43
4.2.8 Freezing Time Prediction for Extended Parameter Range 45
4.3 Freezing Time of Multidimensional Shapes 48
4.3.1 Equivalent Shape Approach 48
4.3.2 EHTD Shape Factor Approach 48
4.3.3 Mean Conducting Path (MCP) Approach 52
4.3.4 Arroyo & Mascheroni's Method 54
4.3.5 Comparison of Shape Factor and Mean Conducting Path Approaches 54
4.4 Thawing Time Prediction 55
4.4.1 Cleland et al.'s method 56
4.4.2 Salvadori and Masheroni's Method 56
4.4.3 Thawing Time Prediction for Multi-Dimensional Shapes 57
4.5 Freezing Heat Load 57
4.5.1 Total and Average Heat Load 57
4.5.2 Heat Load During the Phase Change-Subcooling Period 59
4.5.3 Dynamic Heat Load During the Precooling Period 61
4.5.4 Summary of Method 63
4.6 Summary and Recommendations 63
CAUTION 64

5 Numerical Methods 65
5.1 Introduction 65
5.2 Discretization of the Space Domain 66
5.2.1 Finite Difference Method (FDM) 67
5.2.2 Finite Volume Method (FVM) 70
5.2.3 Finite Element Method (FEM) 71
5.2.4 Discretization of the Space Domain in 2-D and 3-D 75
5.3 Time-Stepping 76
5.3.1 Two-Level Stepping Schemes 76
5.3.2 Lee's Three-Level Scheme 78
5.3.3 Use of Generic ODE Solvers 79
5.3.4 Time Stepping in Structured Grid FDM and FVM 79
5.4 Dealing with Changes in Physical Properties 81
5.4.1 Latent Heat of Freezing 81

5.4.2 Variable Thermal Conductivity 88
5.4.3 Variable Density due to Thermal Expansion 90
5.5 Convergence and Accuracy of Numerical Methods 91
5.6 Summary and Recommendations 92

CAUTION 93

6 Modelling Coupled Phenomena 95
6.1 Introduction 95
6.2 Combined Heat and Mass Transfer 95
6.2.1 Mass Transfer During the Freezing of Dense Foods 96
6.2.2 Mass Transfer During Air Freezing of Porous Foods 98
6.2.3 Mass Transfer During Immersion Freezing 104
6.2.4 Mass Transfer Between Intra- and Extracellular Spaces 104
6.3 Supercooling and Nucleation Effects 105
6.3.1 Instantaneous Nucleation Followed by Dendritic Crystal Growth 105
6.3.2 Gradual Nucleation in an Emulsion 106
6.3.3 Gradual Nucleation in Cellular Tissues 107
6.4 Microscale Modelling of Crystal Growth 110
6.4.1 Enthalpy Method 111
6.4.2 Cellular Automata 112
6.4.3 Front Tracking or Sharp Interface Methods 112
6.4.4 Level Set Method 112
6.4.5 Phase Field Method 113
6.5 High Pressure Freezing and Thawing 116
6.6 Freeze Concentration 118
6.6.1 General Principles 118
6.6.2 Suspension Freeze Concentration Model 120
6.6.3 Layer Freeze Concentration Models 120
6.7 Freezing of Liquid Foods 122
6.7.1 CFD Model of Liquid Food Freezing 122
6.7.2 Freezing of a Well-Stirred Liquid 124
6.8 Microwave and Radio Frequency Thawing 125
6.8.1 General Principles 125
6.8.2 Analytical Solutions 127
6.8.3 Numerical Solutions 127
6.9 Thermomechanical Effects During Freezing 128

7 Conclusions 133
