

CONTENTS

PREFACE xi

1 INTRODUCTION 1

- 1.1 Introduction 1
- 1.2 The Book in Context 2
- 1.3 The Major Ingredients 3
- 1.4 Readership 4
- 1.5 Organization of the Book 4

2 PHYSIOLOGICAL COMPLEXITY AND THE NEED FOR MODELS 7

- 2.1 Introduction 7
- 2.2 Complexity 9
- 2.3 Feedback 10
 - 2.3.1 Negative Feedback 10
 - 2.3.2 Positive Feedback 10
 - 2.3.3 Inherent Feedback 11
 - 2.3.4 Combining Negative and Positive Feedback 11
 - 2.3.5 Derivative and Integral Feedback 13
 - 2.3.6 Effects of Feedback on the Complexity of System Dynamics 13
- 2.4 Control in Physiological Systems 13
 - 2.4.1 General Features 13
 - 2.4.2 Enzymes 15
 - 2.4.3 Hormones 17
- 2.5 Hierarchy 19
- 2.6 Redundancy 20
- 2.7 Function and Behavior and their Measurement 21

- 2.8 Challenges to Understanding 21
- 2.9 Exercises and Assignment Questions 22

3 MODELS AND THE MODELING PROCESS 23

- 3.1 Introduction 23
- 3.2 What is a Model? 23
- 3.3 Why Model? The Purpose of Modeling 25
- 3.4 How Do We Model? The Modeling Process 27
- 3.5 Model Formulation 27
- 3.6 Model Identification 29
- 3.7 Model Validation 30
- 3.8 Model Simulation 32
- 3.9 Summary 33
- 3.10 Exercises and Assignment Questions 34

4 MODELING THE DATA 35

- 4.1 Introduction 35
- 4.2 The Basis of Data Modeling 36
- 4.3 The Why and When of Data Models 36
- 4.4 Approaches to Data Modeling 36
- 4.5 Modeling a Single Variable Occurring Spontaneously 38
 - 4.5.1 Temperature 38
 - 4.5.2 Urine Potassium 41
 - 4.5.3 Gastro-intestinal Rhythms 43
 - 4.5.4 Hormonal Time Series 45
- 4.6 Modeling a Single Variable in Response to a Perturbation 52
 - 4.6.1 Glucose Home Monitoring Data 53
 - 4.6.2 Response to Drug Therapy – Prediction of Bronchodilator Response 54
- 4.7 Two Variables Causally Related 56
 - 4.7.1 Hormone/hormone and Substrate/hormone Series 56
 - 4.7.2 Urine Sodium Response to Water Loading 58
- 4.8 Input/output Modeling for Control 61
 - 4.8.1 Pupil Control 62
 - 4.8.2 Control of Blood Glucose by Insulin 63
 - 4.8.3 Control of Blood Pressure by Sodium Nitroprusside 66
- 4.9 Input/output Modeling: Impulse Response and Deconvolution 67
 - 4.9.1 Impulse Response Estimation 67
 - 4.9.2 The Convolution Integral 69

- 4.9.3 Reconstructing the Input 70
- 4.10 Summary 74
- 4.11 Exercises and Assignment Questions 74

5 MODELING THE SYSTEM 75

- 5.1 Introduction 76
- 5.2 Static Models 76
- 5.3 Linear Modeling 79
 - 5.3.1 The Windkessel Circulatory Model 80
 - 5.3.2 Elimination from a Single Compartment 81
 - 5.3.3 Gas Exchange 82
 - 5.3.4 The Dynamics of a Swinging Limb 83
 - 5.3.5 A Model of Glucose Regulation 87
- 5.4 Distributed Modeling 90
 - 5.4.1 Blood-tissue Exchange 91
 - 5.4.2 Hepatic Removal of Materials 101
 - 5.4.3 Renal Medulla 105
- 5.5 Nonlinear Modeling 110
 - 5.5.1 The Action Potential Model 110
 - 5.5.2 Enzyme Dynamics 120
 - 5.5.3 Baroreceptors 122
 - 5.5.4 Central Nervous Control of Heart Rate 124
 - 5.5.5 Compartmental Modeling 125
 - 5.5.6 Insulin Receptor Regulation 133
 - 5.5.7 Insulin Action Modeling 135
 - 5.5.8 Thyroid Hormone Regulation 138
 - 5.5.9 Modeling the Chemical Control of Breathing 141
- 5.6 Time-varying Modeling 145
 - 5.6.1 An Example in Cardiac Modeling 145
- 5.7 Stochastic Modeling 150
 - 5.7.1 Cellular Modeling 150
 - 5.7.2 Insulin Secretion 154
 - 5.7.3 Markov Model 155
- 5.8 Summary 156
- 5.9 Exercises and Assignment Questions 157

6 MODEL IDENTIFICATION 159

- 6.1 Introduction 159
- 6.2 Data for Identification 160
 - 6.2.1 Selection of Test Signals 160

- 6.2.2 Transient Test Signals 161
- 6.2.3 Harmonic Test Signals 162
- 6.2.4 Random Signal Testing 163
- 6.3 Errors 164
- 6.4 The Way Forward 166
 - 6.4.1 Parameter Estimation 166
 - 6.4.2 Signal Estimation 167
- 6.5 Summary 167
- 6.6 Exercises and Assignment Questions 168

7 PARAMETRIC MODELING – THE IDENTIFIABILITY PROBLEM 169

- 7.1 Introduction 169
- 7.2 Some Examples 173
- 7.3 Definitions 179
- 7.4 Linear Models: The Transfer Function Method 181
- 7.5 Nonlinear Models: The Taylor Series Expansion Method 184
- 7.6 Qualitative Experimental Design 187
 - 7.6.1 Fundamentals 187
 - 7.6.2 An Amino Acid Model 188
- 7.7 Summary 192
- 7.8 Exercises and Assignment Questions 193

8 PARAMETRIC MODELS – THE ESTIMATION PROBLEM 195

- 8.1 Introduction 196
- 8.2 Linear and Nonlinear Parameters 197
- 8.3 Regression: Basic Concepts 198
 - 8.3.1 The Residual 199
 - 8.3.2 The Residual Sum of Squares 200
 - 8.3.3 The Weighted Residual Sum of Squares 200
 - 8.3.4 Weights and Error in the Data 201
- 8.4 Linear Regression 203
 - 8.4.1 The Problem 204
 - 8.4.2 Test on Residuals 205
 - 8.4.3 An Example 207
 - 8.4.4 Extension to the Vector Case 208
- 8.5 Nonlinear Regression 212
 - 8.5.1 The Scalar Case 212
 - 8.5.2 Extension to the Vector Case 216
 - 8.5.3 Algorithms 220
 - 8.5.4 An Example 221

- 8.6 Tests for Model Order 221
- 8.7 Maximum Likelihood Estimation 225
- 8.8 Bayesian Estimation 227
- 8.9 Optimal Experimental Design 231
- 8.10 Summary 233
- 8.11 Exercises and Assignment Questions 233

9 NON-PARAMETRIC MODELS – SIGNAL ESTIMATION 235

- 9.1 Introduction 235
- 9.2 Why is Deconvolution Important? 236
- 9.3 The Problem 236
- 9.4 Difficulty of the Deconvolution Problem 238
- 9.5 The Regularization Method 244
 - 9.5.1 Fundamentals 244
 - 9.5.2 Choice of the Regularization Parameter 246
 - 9.5.3 The Virtual Grid 251
- 9.6 Summary 254
- 9.7 Exercises and Assignment Questions 255

10 MODEL VALIDATION 257

- 10.1 Introduction 257
- 10.2 Model Validation and the Domain of Validity 258
 - 10.2.1 Validation During Model Formulation 258
 - 10.2.2 Validation of the Completed Model 259
- 10.3 Validation Strategies 261
 - 10.3.1 Validation of a Single Model – Basic Approach 261
 - 10.3.2 Validation of a Single Model – Additional Quantitative Tools for Numerically Identified Models 262
 - 10.3.3 Validation of Competing Models 264
- 10.4 Good Practice in Good Modeling 265
- 10.5 Summary 266
- 10.6 Exercises and Assignment Questions 266

11 CASE STUDIES 269

- 11.1 Case Study 1: A Sum of Exponentials Tracer Disappearance Model 269
- 11.2 Case Study 2: Blood Flow Modeling 273

11.3 Case Study 3: Cerebral Glucose Modeling	274
11.4 Case Study 4: Models of the Ligand-Receptor System	276
11.5 Case Study 5: A Simulation Model of the Glucose-Insulin System	280
11.5.1 Model Formulation	280
11.5.2 Results	288
11.6 Case Study 6: A Model of Insulin Control	292
11.7 Case Study 7: Illustrations of Bayesian Estimation	297
11.8 Postscript	308
