Part 1 Descriptive statistics 1

1 Why you need statistics: Types of data	3
<i>Overview</i>	3
1.1 Introduction	3
1.2 Variables and measurement	4
1.3 Major types of measurement	5
<i>Key points</i>	8
2 Describing variables: Tables and diagrams	9
<i>Overview</i>	9
2.1 Introduction	10
2.2 Choosing tables and diagrams	11
2.3 Errors to avoid	17
<i>Key points</i>	18
<i>Computer analysis</i>	18
3 Describing variables numerically: Averages, variation and spread	19
<i>Overview</i>	19
3.1 Introduction	20
3.2 Typical scores: mean, median and mode	20
3.3 Comparison of mean, median and mode	25

3.4	The spread of scores: variability	25
	<i>Key points</i>	30
	<i>Computer analysis</i>	30
4	Shapes of distributions of scores	31
	<i>Overview</i>	31
4.1	Introduction	32
4.2	Histograms and frequency curves	32
4.3	The normal curve	33
4.4	Distorted curves	34
4.5	Other frequency curves	36
	<i>Key points</i>	39
	<i>Computer analysis</i>	39
5	Standard deviation and z-scores: The standard unit of measurement in statistics	40
	<i>Overview</i>	40
5.1	Introduction	40
5.2	Theoretical background	41
5.3	Measuring the number of standard deviations – the z-score	44
5.4	A use of z-scores	46
5.5	The standard normal distribution	46
5.6	An important feature of z-scores	50
	<i>Key points</i>	50
	<i>Computer analysis</i>	50
6	Relationships between two or more variables: Diagrams and tables	51
	<i>Overview</i>	51
6.1	Introduction	51
6.2	The principles of diagrammatic and tabular presentation	52
6.3	Type A: both variables numerical scores	52
6.4	Type B: both variables nominal categories	55
6.5	Type C: one variable nominal categories, the other numerical scores	57
	<i>Key points</i>	58
	<i>Computer analysis</i>	58
7	Correlation coefficients: Pearson correlation and Spearman's rho	59
	<i>Overview</i>	59
7.1	Introduction	60

7.2	Principles of the correlation coefficient	60
7.3	Some rules to check out	66
7.4	Coefficient of determination	68
7.5	Significance testing	69
7.6	Spearman's rho – another correlation coefficient	69
7.7	An example from the literature	73
	<i>Key points</i>	74
	<i>Computer analysis</i>	74

8 Regression: Prediction with precision 75

	<i>Overview</i>	75
8.1	Introduction	76
8.2	Theoretical background and regression equations	78
8.3	Standard error: how accurate are the predicted score and the regression equations?	82
	<i>Key points</i>	84
	<i>Computer analysis</i>	84

Part 2 Significance testing 85

9 Samples and populations: Generalising and inferring 87

	<i>Overview</i>	87
9.1	Introduction	87
9.2	Theoretical considerations	88
9.3	The characteristics of random samples	89
9.4	Confidence intervals	91
	<i>Key points</i>	91
	<i>Computer analysis</i>	92

10 Statistical significance for the correlation coefficient: A practical introduction to statistical inference 93

	<i>Overview</i>	93
10.1	Introduction	93
10.2	Theoretical considerations	94
10.3	Back to the real world: the null hypothesis	96
10.4	Pearson's correlation coefficient again	98
10.5	The Spearman's rho correlation coefficient	100
	<i>Key points</i>	102
	<i>Computer analysis</i>	102

11	Standard error: The standard deviation of the means of samples	103
	<i>Overview</i>	<i>103</i>
11.1	Introduction	103
11.2	Theoretical considerations	104
11.3	Estimated standard deviation and standard error	105
	<i>Key points</i>	<i>108</i>
	<i>Computer analysis</i>	<i>108</i>
12	The <i>t</i>-test: Comparing two samples of correlated/related scores	109
	<i>Overview</i>	<i>109</i>
12.1	Introduction	109
12.2	Dependent and independent variables	112
12.3	Some basic revision	112
12.4	Theoretical considerations	112
12.5	Cautionary note	118
	<i>Key points</i>	<i>118</i>
	<i>Computer analysis</i>	<i>119</i>
13	The <i>t</i>-test: Comparing two samples of unrelated/uncorrelated scores	120
	<i>Overview</i>	<i>120</i>
13.1	Introduction	120
13.2	Theoretical considerations	122
13.3	Standard deviation and standard error	126
13.4	Cautionary note	132
	<i>Key points</i>	<i>132</i>
	<i>Computer analysis</i>	<i>133</i>
14	Chi-square: Differences between samples of frequency data	134
	<i>Overview</i>	<i>134</i>
14.1	Introduction	135
14.2	Theoretical issues	136
14.3	Partitioning chi-square	142
14.4	Important warnings	143
14.5	Alternatives to chi-square	143

14.6	Chi-square and known populations	148
14.7	Chi-square for related samples – the McNemar test	150
14.8	Example from the literature	151
	<i>Key points</i>	151
	<i>Computer analysis</i>	152
	<i>Recommended further reading</i>	152
15	Probability	153
	<i>Overview</i>	153
15.1	Introduction	153
15.2	The principles of probability	154
15.3	Implications	155
	<i>Key points</i>	157
16	Reporting significance levels succinctly	159
	<i>Overview</i>	159
16.1	Introduction	159
16.2	Shortened forms	160
16.3	Examples from the published literature	161
	<i>Key points</i>	163
	<i>Computer analysis</i>	163
17	One-tailed versus two-tailed significance testing	164
	<i>Overview</i>	164
17.1	Introduction	164
17.2	Theoretical considerations	165
17.3	Further requirements	166
	<i>Key points</i>	167
18	Ranking tests: Nonparametric statistics	168
	<i>Overview</i>	168
18.1	Introduction	168
18.2	Theoretical considerations	169
18.3	Nonparametric statistical tests	169
18.4	Three or more groups of scores	177
	<i>Key points</i>	177
	<i>Computer analysis</i>	177
	<i>Recommended further reading</i>	177

Part 3 Introduction to analysis of variance 179

19 The variance ratio test: The *F*-ratio to compare two variances 181

Overview 181

19.1 Introduction 181

19.2 Theoretical issues and an application 182

Key points 186

Computer analysis 186

20 Analysis of variance (ANOVA): Introduction to the one-way unrelated or uncorrelated ANOVA 187

Overview 187

20.1 Introduction 187

20.2 Some revision and some new material 188

20.3 Theoretical considerations 189

20.4 Degrees of freedom 192

20.5 The analysis of variance summary table 198

20.6 Quick calculation methods for ANOVA 199

Key points 202

Computer analysis 203

21 Analysis of variance for correlated scores or repeated measures 204

Overview 204

21.1 Introduction 204

21.2 Theoretical considerations 207

21.3 Examples 207

21.4 Quick method for calculating the correlated ANOVA 214

Key points 219

Computer analysis 219

22 Two-way analysis of variance for unrelated/uncorrelated scores: Two studies for the price of one? 220

Overview 220

22.1 Introduction 220

22.2 Theoretical considerations 222

22.3 Steps in the analysis 223

22.4 More on interactions 236

22.5 Calculation of two-way ANOVA using quick method 238

22.6 Three or more independent variables 242

	<i>Key points</i>	245
	<i>Computer analysis</i>	245
23	Multiple comparisons in ANOVA: Just where do the differences lie?	246
	<i>Overview</i>	246
23.1	Introduction	247
23.2	Methods	248
23.3	Planned versus <i>a posteriori</i> (<i>post hoc</i>) comparisons	249
23.4	The Scheffé test for one-way ANOVA	249
23.5	Multiple comparisons for multifactorial ANOVA	252
	<i>Key points</i>	253
	<i>Computer analysis</i>	253
	<i>Recommended further reading</i>	253
24	Mixed-design ANOVA	254
	<i>Overview</i>	254
24.1	Introduction	254
24.2	Mixed designs and repeated measures	255
	<i>Key points</i>	269
	<i>Computer analysis</i>	269
	<i>Recommended further reading</i>	269
25	Analysis of covariance (ANCOVA): Controlling for additional variables	270
	<i>Overview</i>	270
25.1	Introduction	270
25.2	Analysis of covariance	271
	<i>Key points</i>	281
	<i>Computer analysis</i>	282
	<i>Recommended further reading</i>	282
26	Multivariate analysis of variance (MANOVA)	283
	<i>Overview</i>	283
26.1	Introduction	284
26.2	MANOVA's two stages	287
26.3	Doing MANOVA	288
26.4	Reporting your findings	294
	<i>Key points</i>	294
	<i>Computer analysis</i>	295
	<i>Recommended further reading</i>	295

27 Discriminant (function) analysis – especially in MANOVA 296

	<i>Overview</i>	296
27.1	Introduction	297
27.2	Doing the discriminant function analysis	299
27.3	Reporting your findings	305
	<i>Key points</i>	306
	<i>Computer analysis</i>	306
	<i>Recommended further reading</i>	306

28 Statistics and the analysis of experiments 307

	<i>Overview</i>	307
28.1	Introduction	307
28.2	The Patent Stats Pack	308
28.3	Checklist	308
28.4	Special cases	310
	<i>Key points</i>	311
	<i>Computer analysis</i>	312

Part 4 More advanced correlational statistics

313

29 Partial correlation: Spurious correlation, third or confounding variables, suppressor variables 315

	<i>Overview</i>	315
29.1	Introduction	315
29.2	Theoretical considerations	316
29.3	The calculation	319
29.4	Interpretation	320
29.5	Multiple control variables	321
29.6	Suppressor variables	321
29.7	An example from the research literature	322
29.8	An example from a student's work	323
	<i>Key points</i>	324
	<i>Computer analysis</i>	324

30 Factor analysis: Simplifying complex data 325

	<i>Overview</i>	325
30.1	Introduction	326
30.2	A bit of history	327
30.3	Concepts in factor analysis	329

30.4	Decisions, decisions, decisions	331
30.5	Exploratory and confirmatory factor analysis	336
30.6	An example of factor analysis from the literature	338
30.7	Reporting the results	341
	<i>Key points</i>	342
	<i>Computer analysis</i>	342
	<i>Recommended further reading</i>	342
31	Multiple regression and multiple correlation	344
	<i>Overview</i>	344
31.1	Introduction	345
31.2	Theoretical considerations	345
31.3	Stepwise multiple regression example	351
31.4	Reporting the results	353
31.5	An example from the published literature	354
	<i>Key points</i>	355
	<i>Computer analysis</i>	355
	<i>Recommended further reading</i>	355
32	Path analysis	357
	<i>Overview</i>	357
32.1	Introduction	357
32.2	Theoretical considerations	358
32.3	An example from published research	363
32.4	Reporting the results	367
	<i>Key points</i>	367
	<i>Computer analysis</i>	368
	<i>Recommended further reading</i>	368
33	The analysis of a questionnaire/survey project	369
	<i>Overview</i>	369
33.1	Introduction	369
33.2	The research project	370
33.3	The research hypothesis	371
33.4	Initial variable classification	372
33.5	Further coding of data	373
33.6	Data cleaning	374
33.7	Data analysis	375
	<i>Key points</i>	376
	<i>Computer analysis</i>	376

Part 5 Assorted advanced techniques 377**34 Statistical power analysis: Do my findings matter? 379***Overview* 379

34.1 Introduction 379

34.2 Statistical significance 380

34.3 Method and statistical power 380

34.4 Size of the effect in studies 381

34.5 An approximation for nonparametric tests 383

34.6 Analysis of variance (ANOVA) 384

Key points 385*Computer analysis* 385**35 Meta-analysis: Combining and exploring statistical findings from previous research 386***Overview* 386

35.1 Introduction 386

35.2 The Pearson correlation coefficient as the effect size 388

35.3 Other measures of effect size 388

35.4 Effects of different characteristics of studies 389

35.5 First steps in meta-analysis 390

35.6 Illustrative example 396

35.7 Comparing a study with a previous study 399

35.8 Reporting the results 400

Key points 401*Recommended further reading* 401**36 Reliability in scales and measurement: Consistency and agreement 402***Overview* 402

36.1 Introduction 403

36.2 Item-analysis using item–total correlation 403

36.3 Split-half reliability 405

36.4 Alpha reliability 406

36.5 Agreement between raters 408

Key points 411*Computer analysis* 412*Recommended further reading* 412**37 Confidence intervals 413***Overview* 413

37.1 Introduction 413

37.2	The relationship between significance and confidence intervals	416
37.3	Regression	419
37.4	Other confidence intervals	420
	<i>Key points</i>	421
	<i>Computer analysis</i>	421

Part 6 Advanced qualitative or nominal techniques

423

38 Log-linear methods: The analysis of complex contingency tables 425

	<i>Overview</i>	425
38.1	Introduction	426
38.2	A two-variable example	428
38.3	A three-variable example	435
38.4	Reporting the results	445
	<i>Key points</i>	446
	<i>Computer analysis</i>	446
	<i>Recommended further reading</i>	446

39 Multinomial logistic regression: Distinguishing between several different categories or groups 447

	<i>Overview</i>	447
39.1	Introduction	448
39.2	Dummy variables	450
39.3	What can multinomial logistic regression do?	450
39.4	Worked example	452
39.5	Accuracy of the prediction	454
39.6	How good are the predictors?	455
39.7	The prediction	458
39.8	What have we found?	458
39.9	Reporting the results	460
	<i>Key points</i>	460
	<i>Computer analysis</i>	461

40 Binomial logistic regression 462

	<i>Overview</i>	462
40.1	Introduction	463
40.2	Typical example	467
40.3	Applying the logistic regression procedure	470
40.4	The regression formula	473
40.5	Reporting the results	475
	<i>Key points</i>	475
	<i>Computer analysis</i>	475

	Appendices	476
Appendix A	Testing for excessively skewed distributions	476
Appendix B1	Large-sample formulae for the nonparametric tests	479
Appendix B2	Nonparametric tests for three or more groups	481
Appendix C	Extended table of significance for the Pearson correlation coefficient	485
Appendix D	Table of significance for the Spearman correlation coefficient	488
Appendix E	Extended table of significance for the t -test	491
Appendix F	Table of significance for chi-square	494
Appendix G	Extended table of significance for the sign test	495
Appendix H	Table of significance for the Wilcoxon matched pairs test	498
Appendix I	Table of significance for the Mann–Whitney U -test	501
Appendix J	Table of significance values for the F -distribution	503
Appendix K	Table of significant values of t when making multiple t -tests	506
	<i>Glossary</i>	509
	<i>References</i>	518
	<i>Index</i>	519
