

# Contents

Preface — v

List of contributing authors — xv

Clemens Posten

**1 Introduction – Integration in microalgal biotechnology — 1**

1.1 Integration on the process level — 2

1.2 Integration on the metabolic level — 4

1.3 Integration into environmental conditions — 5

1.4 Adaptation to cultural realities — 6

## **Integrated production processes**

Rosa Rosello Sastre

**2 Products from microalgae: An overview — 13**

2.1 Microalgae: An introduction — 13

2.2 Products — 15

2.2.1 Use and production of algal biomass — 15

2.2.2 Microalgae for human nutrition — 18

2.2.2.1 *Spirulina (Arthrospira)* — 19

2.2.2.2 *Chlorella* — 20

2.2.2.3 *Dunaliella salina* — 21

2.2.3 Microalgae for animal feed — 21

2.2.4 Microalgae as natural fertilizer — 22

2.2.5 Microalgae in cosmetics — 22

2.2.6 Fine chemicals — 23

2.2.6.1 PUFAs — 23

2.2.6.2 Pigments — 26

Pigments as antioxidants — 26

Pigments as natural colorants — 28

2.2.6.3 Polysaccharides — 29

2.2.6.4 Recombinant proteins — 31

2.2.6.5 Stable isotopes — 31

2.2.7 Micro- and nanostructured particles — 31

2.2.8 Bulk chemicals — 33

2.2.9 Energy production from microalgae — 35

2.2.9.1 Biodiesel — 35

2.2.9.2 Bio-ethanol — 40

2.2.9.3 Bio-hydrogen — 41

2.2.9.4 Bio-gas — 42

2.2.9.5 Biorefinery of microalgae — 43

- 2.3 Conclusion — 44
- References — 44

Min Thein, Toe Aung, Khin Pyone Lwin, May Yu Khaing and Otto Pulz

**3 *Spirulina* production in volcano lakes: From natural resources to human welfare — 51**

- 3.1 Introduction — 51
- 3.2 Natural *Spirulina* lakes in Myanmar — 52
- 3.3 Environmental parameters of Myanmar *Spirulina* lakes — 54
- 3.4 *Spirulina* production from natural lakes — 57
  - 3.4.1 Harvesting — 57
  - 3.4.2 Washing and dewatering — 58
  - 3.4.3 Extrusion and sun drying — 59
  - 3.4.4 Lake-side enhancement ponds — 61
- 3.5 Sustainable *Spirulina* production from volcanic crater lakes — 62
- 3.6 Myanmar *Spirulina* products — 63
- 3.7 *Spirulina* as biofertilizer — 64
- 3.8 *Spirulina* as a biogas enhancer — 67
- 3.9 *Spirulina* as a source of biofuel — 67
- 3.10 Myanmar and German cooperation in microalgae biotechnology — 67
- 3.11 Discussion — 68
- 3.12 Conclusion — 68
  - Acknowledgments — 69
  - References — 69

C. Thomsen, S. Rill and L. Thomsen

**4 Case study of a temperature-controlled outdoor PBR system in Bremen — 73**

- Acknowledgments — 77
- References — 77

Robin Shields and Ingrid Lupatsch

**5 Algae for aquaculture and animal feeds — 79**

- 5.1 Introduction — 79
- 5.2 Microalgal use in aquaculture hatcheries — 79
  - 5.2.1 Microalgal strains used in aquaculture hatcheries — 80
  - 5.2.2 Methods of microalgal cultivation for aquaculture — 82
  - 5.2.3 Role of microalgae in aquaculture hatcheries — 82
    - 5.2.3.1 Microalgae as a feed source for filter-feeding aquaculture species — 82
    - 5.2.3.2 Microalgae as a feed source for zooplanktonic live prey — 83
    - 5.2.3.3 Benthic microalgae as a feed source for gastropod mollusks and echinoderms — 84

- 5.2.3.4 Addition of microalgae to fish larval rearing tanks — 85
- 5.2.3.5 Use of microalgal concentrates in aquaculture hatcheries — 87
- 5.3 Use of algae in formulated feeds for aquaculture species and terrestrial livestock — 88
  - 5.3.1 Algae as a supplement to enhance the nutritional value of formulated feeds — 88
    - 5.3.1.1 Vitamins and minerals — 88
    - 5.3.1.2 Pigments — 89
    - 5.3.1.3 Fatty acids — 90
  - 5.3.2 Algae as a potential feed ingredient: source of protein and energy — 90
- 5.4 Outlook — 95
  - References — 96

Christophe Hug and Denis von der Weid

- 6 Algae as an approach to combat malnutrition in developing countries — 101**
  - 6.1 Introduction — 101
  - 6.2 Algae in human food — 101
  - 6.3 Microalgae as a solution against malnutrition: meet *Spirulina* — 102
  - 6.4 Small-scale *Spirulina* production as a development tool — 103
  - 6.5 *Spirulina* as a business to combat malnutrition — 104
  - 6.6 *Spirulina* and its place in food aid and development policies — 106
  - 6.7 Evidence of *Spirulina* in malnutrition — 107
  - 6.8 Conclusion — 109
    - Acknowledgements — 109
    - References — 109

Thomas Happe, Camilla Lambertz, Jong-Hee Kwon,  
Sascha Rexroth and Matthias Rögner

- 7 Hydrogen production by natural and semiartificial systems — 111**
  - 7.1 Biological hydrogen production of microorganisms — 111
  - 7.2 Photobiological hydrogen production by green algae — 115
  - 7.3 Photohydrogenproduction by cyanobacterial design cells — 117
  - 7.4 Photohydrogen production by a “biobattery” — 119
  - 7.5 Photobioreactor design for hydrogen production — 120
  - 7.6 Photobioreactor geometry — 121
  - 7.7 Process control — 122
  - 7.8 Upscaling strategies — 123
    - References — 124

Claudia B. Grewe and Carola Griehl

- 8 The carotenoid astaxanthin from *Haematococcus pluvialis* — 129**
  - 8.1 Introduction — 129
  - 8.2 Characteristics and biosynthesis — 130
    - 8.2.1 Chemical forms of astaxanthin — 130
    - 8.2.2 Astaxanthin biosynthesis — 131
    - 8.2.3 Function of astaxanthin — 133
  - 8.3 *Haematococcus pluvialis* — 133
    - 8.3.1 General characteristics — 133
    - 8.3.2 Factors responsible for ax accumulation — 135
    - 8.3.3 Industrial production of *Haematococcus* — 138
  - 8.4 Conclusions and outlook — 140
    - References — 140

Christian Walter

- 9 Screening and development of antiviral compound candidates from phototrophic microorganisms — 145**
  - 9.1 Introduction — 145
  - 9.2 Supply of natural compounds from microalgae — 146
  - 9.3 Sterilizable photobioreactors — 147
  - 9.4 Antiviral agents from microalgae — 150
  - 9.5 Antiviral screening — 153
    - 9.5.1 Primary target of screening — 153
    - 9.5.2 Smart screening approach — 153
    - 9.5.3 Basic process sequence — 154
    - 9.5.4 Antiviral activity and immunostimulating effects of *Arthrospira platensis* — 156
    - 9.5.5 Characterization of novel antiviral spirulan-like compounds — 157
  - 9.6 Conclusion — 161
    - Acknowledgements — 162
    - References — 162

Timo Niedermeyer and Mark Brönstrup

- 10 Natural product drug discovery from microalgae — 169**
  - 10.1 Introduction — 169
    - 10.1.1 Eukaryotic microalgae — 170
      - 10.1.1.1 Dinoflagellates — 170
      - 10.1.1.2 Diatoms — 172
    - 10.1.2 Cyanobacteria — 172
      - 10.1.2.1 Proteinase inhibitors — 174
      - 10.1.2.2 Cytotoxic compounds — 175
      - 10.1.2.3 Antiviral substances — 179

- 10.1.2.4 Antimicrobial metabolites — 179
- 10.1.2.5 Miscellaneous bioactivities — 180
- 10.1.3 Three examples of current microalgal drug research projects — 183
  - 10.1.3.1 Dolastatins as leads for anti-cancer drugs — 183
  - 10.1.3.2 Cryptophycins as leads for anti-cancer drugs — 186
  - 10.1.3.3 Microcystins as targeted anti-cancer drugs — 187
- 10.1.4 Outlook — 187
- References — 189

#### **Socio-economic and environmental considerations**

Michel H. M. Eppink, Maria J. Barbosa and Rene H. Wijffels

### **11 Biorefining of microalgae: Production of high-value products, bulk chemicals and biofuels — 203**

- 11.1 Introduction — 203
- 11.2 Structural biorefining approach of microalgae — 205
  - 11.2.1 Approach — 205
  - 11.2.2 Cell disruption, fractionation and mild cell disruption of organelles — 208
  - 11.2.3 Extraction and fractionation of high-value components — 210
  - 11.2.4 Economically feasible continuous biorefining concept — 211
- 11.3 Conclusions — 212
- References — 213

Garry Henderson

### **12 Development of a microalgal pilot plant: A generic approach — 215**

- 12.1 Understanding the aims of the pilot plant — 215
- 12.2 Pilot plant location and site selection — 216
- 12.3 Develop the process flow diagram — 216
- 12.4 Know what will be required to conduct experiments and measure the data — 217
- 12.5 Sizing of the units — 217
- 12.6 Plant layout — 219
- 12.7 HAZOP study — 221
- 12.8 Multidisciplinary review of the design — 224
- 12.9 Tender for plant construction — 224
- 12.10 Finalize the design — 225
- References — 225

Roberto Bassi, Pierre Cardol, Yves Choquet, Thomas de Marchin, Chloe Economou, Fabrice Franck, Michel Goldschmidt-Clermont, Anna Jacobi, Karen Loizeau, Gregory Mathy, Charlotte Plancke, Clemens Posten, Saul Purton, Claire Remacle, Carsten Vejrzka, Lili Wei and Francis-André Wollman

**13 Finding the bottleneck: A research strategy for improved biomass production — 227**

- 13.1 Introduction: What do we expect from cell engineering? — 227
  - 13.1.1 The need for domestication of microalgae — 227
  - 13.1.2 Limitation of traditional approaches to strain improvement — 228
- 13.2 Algal domestication through chloroplast genetic engineering — 229
  - 13.2.1 Chloroplast engineering in *Chlamydomonas*: progress and challenges — 229
  - 13.2.2 A synthetic biology approach to chloroplast metabolic engineering — 232
  - 13.2.3 Mitigating the risks and concerns of GM algae — 234
- 13.3 Algal domestication through nucleus genetic engineering — 235
  - 13.3.1 Improving light to biomass conversion by regulation of the pigment optical density of algal cultures — 235
- 13.4 Models for predicting growth in photobioreactors — 237
  - 13.4.1 PAM fluorimetry: a keyhole to look into the photosynthetic machinery — 237
  - 13.4.2 Microalgae cultivation in photobioreactors: the fluctuating light effects — 240
  - 13.4.3 Standard model for growth under an exponential light gradient — 244
- 13.5 Cells' response to changing environments: the example of nitrogen limitation — 247
  - Acknowledgments — 249
  - References — 249

Vítor Verdelho, Ana P. Carvalho, Diana Fonseca and João Navalho

**14 Trends driving microalgae-based fuels into economical production — 253**

- 14.1 Introduction — 253
- 14.2 Leading trends — 254
  - 14.2.1 Microalgae biorefinery for food, feed, fertilizer and energy production — 254
  - 14.2.2 Biofuel production from low-cost microalgae grown in wastewater — 255
  - 14.2.3 Biogas upgrading with microalgae production for production of electricity — 257

- 14.2.4 Hydrocarbon *milking* of modified *Botryococcus* microalgae strains — **257**
- 14.2.5 Hydrogen production combining direct and indirect microalgae biophotolysis — **258**
- 14.2.6 Direct ethanol production from autotrophic cyanobacteria — **259**
- 14.3 Production platforms — **262**
- 14.3.1 Ocean — **262**
- 14.3.2 Lakes — **263**
- 14.3.3 Raceways — **263**
- 14.3.4 Photobioreactors — **263**
- 14.3.5 Fermenters — **263**
- 14.4 Conclusions — **263**
- References — **264**
  
- Evan Stephens, Liam Wagner, Ian L. Ross and Ben Hankamer
- 15 Microalgal production systems: Global impact of industry scale-up — 267**
- 15.1 Microalgal biotechnology — **267**
- 15.2 Global challenges, production and demand — **268**
- 15.2.1 Global fuel production and demand — **268**
- 15.2.2 Global food production and demand — **269**
- 15.2.3 Solar irradiance and areal requirement — **270**
- 15.2.4 Global challenges — **271**
- 15.3 Potential production and limitations — **272**
- 15.3.1 Solar energy and geographic location — **272**
- 15.3.2 Potential productivity — **274**
- 15.3.3 Land resources — **276**
- 15.3.4 Carbon management and associated costs — **278**
- 15.3.4.1 CO<sub>2</sub> requirements — **278**
- 15.3.4.2 CO<sub>2</sub> utilization and sequestration — **279**
- 15.3.4.3 CO<sub>2</sub> delivery — **280**
- 15.3.5 Nutrient management and associated costs — **281**
- 15.3.5.1 Phosphorus — **282**
- 15.3.5.2 Nitrogen — **282**
- 15.3.5.3 Nutrient recycling — **282**
- 15.3.6 Water management and associated costs — **283**
- 15.4 Global impact of scale-up — **285**
- 15.4.1 Addressing world production — **285**
- 15.4.2 Economics of large-scale microalgal production systems — **287**
- 15.4.3 Techno-economic analysis of microalgal production systems — **288**
- 15.4.3.1 Cultivation systems — **288**
- 15.4.3.2 Impact of capital costs — **289**
