

Contents

PREFACE **x**

ACKNOWLEDGMENTS **xi**

INTRODUCTION **xii**

Chapter 1—Defining Important Concepts **1**

- 1.1 Key Concepts in Molecular Biology for the Study of Human Nutrition / 1
- 1.2 The Inheritance of Genetic Packets of Information / 9
- 1.3 A Brief Overview of Evolutionary Biology and the Ascent of Man / 10
- 1.4 The *-omics* Revolution / 13

Chapter 2—Molecular Mechanisms of Genetic Variation Linked to Diet **19**

- 2.1 A Brief History of the Human Diet / 19
- 2.2 The Role of Milk in Human Evolution / 19
- 2.3 Micronutrients and the Evolution of Skin Pigmentation / 21
- 2.4 Micronutrients Optimize Gametogenesis and Reproductive Fecundity / 25
- 2.5 Direct Dietary Selection of a Human Metabolomic Profile / 29
- 2.6 The Evolution of Taste as a Survival Mechanism / 34
- 2.7 The Mystery of Alcohol Dehydrogenase Polymorphisms and Ethanol Toxicity / 36
- 2.8 Evolution of Xenobiotic Metabolism in Humans / 37

**Chapter 3—Essential Nutrients and Genomic Integrity:
Developmental and Degenerative Correlates** **40**

- 3.1 Micronutrients and Genomic Stability and Function / 40

Chapter 4—Nutrients and Cerebral Function in Human Evolution 51

- 4.1 Human Encephalisation May be Linked to an Evolutionary Reduction in Gut Mass / 51
- 4.2 Weaning and Brain Development / 52
- 4.3 Micronutrients and the Cerebral Basis of Spirituality and Social Structure / 54
- 4.4 Pharmacotoxicology of Plants and Cultural Evolution / 56

Chapter 5—The Evolution of Micronutrient Metabolism 58

- 5.1 Antioxidants, Evolution, and Human Health / 58

Chapter 6—Evolved Refinement of the Human Lifecycle Based on Nutritional Criteria 62

- 6.1 Human Breast Milk—An Evolved Food / 62
- 6.2 Conflict between Parent and Offspring over Nutrient Requirements / 65
- 6.3 Natural Selection for Foraging Efficiency / 70
- 6.4 Evolution of Senescence / 71

Chapter 7—The Evolution of Human Disease 74

- 7.1 The Conflict between Agriculture and Ancestral Genes / 74
- 7.2 Obesity: A Chronic Plague of our Affluent Societies / 79
- 7.3 Prion Protein Locus and Human Evolution: The Link Between Variant Creutzfeld-Jakob Disease and Cannibalism / 80

Chapter 8—Contemporary Dietary Patterns that Work: The Mediterranean Diet 82

- 8.1 Tomatoes / 82
- 8.2 Olive Oil / 83
- 8.3 Red Wine / 83
- 8.4 Bioflavonoids / 84
- 8.5 Fish / 85

Chapter 9—Some Non-Micronutrient Essential and Nonessential Nutrients with Molecular and Possible Evolutionary Impact 88

- 9.1 Lecithins / 88
- 9.2 Lipid-Derived First Messengers—The Eicosanoids / 91
- 9.3 Isoflavones—Genomic and Nongenomic Influence at the Estrogen Receptor / 93
- 9.4 Phytic Acid / 94

Chapter 10—Natural Food Toxins and the Human Diet 97

- 10.1 Dietary Zootoxins / 97
- 10.2 Dietary Phytotoxins / 101

Chapter 11—Nutrigenomics 102

11.1 What is Nutrigenomics? / 102

11.2 Genetic Buffering Underpins Nutrigenomic Relationships / 104

Chapter 12—The Evolution of Protein Function 110

**Chapter 13—Leading Edge Laboratory Tools in Nutrigenomics and Human
Evolutionary Studies 113**

13.1 Denaturing HPLC / 113

13.2 DNA Sequencing / 113

13.3 Nucleic Acid Microchip Techniques / 114

13.4 The Polymerase Chain Reaction / 115

13.5 Protein Mass Spectrometry / 118

13.6 Bioinformatics / 119
