## Contents

Preface		x
PA	ART 1 CONCEPTS AND PRINCIPLES	1
1	Changing priorities for nutrition education	3
	Identification of the essential nutrients	3
	Adequacy: the traditional priority in nutrition	5
	The new priority: diet as a means to health promotion or disease prevention	7
	Is intervention to induce dietary change justified?	16
	Effecting dietary change	22
	Concluding remarks	28
2	Food selection	29
	Introduction and aims of the chapter	29
	The biological model of food	30
	Dietary and cultural prejudice	31
	Food classification systems	32
	Non-nutritional uses of food	36
	The hierarchy of human needs	38
	A model of food selection: the hierarchy of availabilities model	39
	Physical availability	41
	Economic availability	42
	Cultural availability	54
	'Gatekeeper' limitations on availability	60
3	Methods of nutritional surveillance and research	63
	Introduction and aims of the chapter	63
	Nutritional assessment and surveillance	63
	Methods used to establish links between diet and disease	97
4	Dietary guidelines and recommendations	123
	The range of 'expert reports' and their consistency	123
	Variations in the presentation of guidelines and recommendations	125
	'Food' recommendations	127
	Energy and body weight	128
	Recommendations for fats, carbohydrates, protein and salt	128
	Alcohol	130

VIII	Content	٠,

	How do current UK diets compare with 'ideal' intakes?	133
	Other nutrients	134
	Willingness to change	134
	Some barriers to dietary change	136
	Aids to food selection	137
	Concluding remarks	141
5	Cellular energetics	143
	Introduction and aims of the chapter	143
	Overview of metabolism	143
	Metabolism of glucose and the monosaccharides	145
	Metabolism of fatty acids and glycerol	147
	Metabolism of amino acids	148
	The pentose phosphate pathway	148
	An overview of macronutrient handling in the gut	149
PAI	RT 2 ENERGY, ENERGY BALANCE AND OBESITY	151
6	Introduction to energy aspects of nutrition	153
	Sources of energy	153
	Units of energy	153
	How are energy requirements estimated?	153
	Variation in average energy requirements: general trends	156
	Energy content of foods	157
	Sources of dietary energy by nutrient	157
	Energy density	159
	Nutrient density	162
	The sources of dietary energy by food groups	162
	Starvation	163
	Eating disorders	167
	Cancer cachexia	170
7	Energy balance and its regulation	173
	Concept of energy balance	173
	Is there physiological regulation of energy balance?	174
	'Set point' theory	175
	Is energy expenditure regulated?	175
	External influences that affect food intake	178
	Control of energy intake	178
8	Obesity	187
	Defining obesity	187
	Prevalence of obesity	187
	Consequences of obesity	194
	The metabolic syndrome or 'syndrome X'	201
	Causes of obesity	201
	Prevention and treatment of obesity in populations	210
	Obesity treatment in individuals	213
	More 'aggressive' treatments for obesity	217

PAI	RT 3 THE NUTRIENTS	223
9	Carbohydrates	225
	Introduction	225
	Nature and classification of carbohydrates	226
	Dietary sources of carbohydrate	227
	Sugars	228
	Artificial sweeteners	230
	Diet and dental health	232
	Starches	235
	Non-starch polysaccharide	237
	Resistant starch	240
	The glycaemic index	241
	Does dietary fibre/non-starch polysaccharide protect against bowel cancer and heart disease?  Possible mechanisms by which diet may influence the risk of bowel cancer and heart disease	241 245
10	Protein and amino acids	247
	Traditional scientific aspects of protein nutrition	247
	Significance of protein in human nutrition	255
	Concluding remarks	261
11	Fat	263
	Nature of dietary fat	263
	Types of fatty acids	264
	Sources of fat in the diet	269
	Roles of fat in the diet	272
	Blood lipoproteins	278
	Digestion, absorption and transport of dietary lipids	279
	Transport of endogenously produced lipids	280
	The diet-heart hypothesis	282
	Current 'health images' of different dietary fats	284
	The key tenets of the diet-heart hypothesis	289
	Review of the evidence for the diet-heart hypothesis	289
	Fish oils	295
	Other natural oils used as supplements	299
12	The micronutrients	301
	Scope of this chapter	301
	Overview of dietary supplements	302
	General micronutrient adequacy of British adults	303
	Antioxidants and the oxidant theory of disease	308
	Do high antioxidant intakes prevent heart disease, cancer and other chronic diseases?	313
	Use of substances other than essential nutrients as dietary supplements	318
13	The vitamins	329
	Some general concepts and principles	329
	The individual vitamins	332

Χ	Co	nte	nts

14	The minerals	357
	Introduction	357
	Chromium	358
	Copper	359
	Fluoride	360
	Magnesium	360
	Manganese	361
	Molybdenum	361
	Phosphorus	362
	Potassium	362
	Selenium	363
	Zinc	364
	lodine and iodine deficiency diseases	365
	Iron and iron deficiency anaemia	368
	Calcium, diet and osteoporosis	373
	Calcium and bone health	376
	Salt and hypertension	383
PAF	RT 4 VARIATION IN NUTRITIONAL REQUIREMENTS AND PRIORITIES	395
15	Nutrition and the human lifecycle	397
13	Introduction	397
		399
	Nutritional aspects of pregnancy Lactation	399 411
		412
	Infancy Childhood and adolescence	422
		422 426
	The elderly	
16	Nutrition as treatment	439
	Diet as a complete therapy	439
	Diet as a specific component of therapy	443
	Malnutrition in hospital patients	449
17	Some other groups and situations	459
	Vegetarianism	459
	Racial minorities	465
	Nutrition and physical activity	470
PAF	RT 5 THE SAFETY AND QUALITY OF FOOD	481
18	The safety and quality of food	483
	Aims of the chapter	483
	Consumer protection	483
	Food poisoning and the microbiological safety of food	489
	Bovine spongiform encephalopathy	502
	Food processing	508
	Chemical safety of food	512
	Functional foods	520
	Glossary	529
	References	543
	Index	565
