
Table of Contents

Preface	3
1 Background	4
2 Clinical measurement of ocular blood flow	6
2.1 Color Doppler imaging	6
2.2 Laser Doppler flowmetry and scanning laser flowmetry	7
2.3 Retinal vessel analyzer	8
2.4 Blue field entoptic stimulation	8
2.5 Laser interferometric measurement of fundus pulsation	8
2.6 Dynamic contour tonometry and ocular pulse amplitude	9
2.7 Pulsatile ocular blood flow analyzer	10
2.8 Laser speckle method (laser speckle flowgraphy)	10
2.9 Digital scanning laser ophthalmoscope angiography	10
2.10 Doppler optical coherence tomography	12
2.11 Retinal oximetry	12
3 Autoregulation	16
3.1 Mechanisms of autoregulation	16
3.2 Impaired autoregulation in glaucoma	18
3.3 Mechanisms of impairment and damage	19
4 Vascular risk factors	21
4.1 Blood pressure and perfusion pressure	21
4.2 Age	27
4.3 Migraine	31
4.4 Disc hemorrhage	33
4.5 Diabetes	33
4.6 Emerging risk factors	35
5 The relationship between blood flow and structure	46
5.1 Capillary dropout	46
5.2 Blood pressure and optic disc morphology	46
5.3 Blood flow and optic disc morphology	47
5.4 Blood flow and retinal nerve fiber layer thickness	49
5.5 Circadian flow fluctuations and retinal nerve fiber layer	49
5.6 Central corneal thickness	50
6 Ocular blood flow and visual function	51
7 Topical medications and ocular blood flow	54
7.1 Background	54
7.2 Topical CAIs	54
7.3 Topical carbonic anhydrase inhibitors and visual function	55
