

Detailed contents

Symbols and abbreviations	<i>xvii</i>
Glossary of terms	<i>xx</i>
Statistical formulae	<i>xxvii</i>
<hr/>	
Section 1 Epidemiology in the clinic	1
Introduction	<i>2</i>
<hr/>	
1 The diagnostic process	3
Introduction: epidemiology in the clinic	<i>4</i>
Measures of disease frequency	<i>6</i>
Distribution of disease	<i>9</i>
Is there anything wrong?	<i>10</i>
Risk factors	<i>12</i>
Identifying risk factors	<i>14</i>
Validity of diagnostic tests	<i>16</i>
Clinical uses of predictive value	<i>18</i>
Pre-test probability	<i>20</i>
Likelihood ratios and post-test probabilities	<i>22</i>
So what has my patient got? The Bayesian clinician	<i>26</i>
<hr/>	
2 Management decisions	27
Decisions, decisions . . . the principles of clinical management	<i>28</i>
What is prognosis? Looking into the crystal ball	<i>30</i>
Prognosis: mortality	<i>32</i>
Prognosis: morbidity	<i>34</i>
Evidence-based management	<i>36</i>
Clinical guidelines	<i>38</i>
How effective is the treatment?	<i>42</i>
Interpreting reports of clinical trials	<i>44</i>
How appropriate is the treatment?	<i>46</i>
Patient-centred decision-making	<i>48</i>
<hr/>	
3 Risk communication and promoting health	51
Health promotion in clinical practice	<i>52</i>

xii DETAILED CONTENTS

Could it have been prevented?	54
Communicating risk	56
Health promotion in the clinic	58
Smoking and alcohol advice	60
Exercise, weight, and dietary advice	62
Sexual health	64
Outbreak investigation	66
Breaking the chain of infection	68
<hr/>	
Section 2 Evidence-based practice	71
Introduction	72
<hr/>	
4 Finding and summarizing evidence	73
Finding and evaluating existing evidence	74
Electronic resources	76
Critical appraisal	78
Appraisal checklists	82
CONSORT statement	84
Systematic review	88
Meta-analysis	90
Analysis and interpretation of a meta-analysis	92
<hr/>	
5 Preventive medicine and screening	97
Prevention strategies	98
Levels of prevention	100
Preventing communicable disease	102
Preventing non-communicable disease: example of cardiovascular disease	104
Basic infectious disease epidemiology	106
Vaccination	108
Screening overview	112
Screening programmes	114
Evaluating screening programmes	116
Major UK screening programmes	118
<hr/>	
6 Evaluating clinical practice	119
Introduction	120
Clinical governance and ethics	122

Carrying out an audit: getting started	124
Choosing the standards	126
Writing your protocol	129
Choosing the sample	130
Data collection	132
Data collection: examples	134
Analysing data	136
Interpreting findings	138
Changing practice	140
Completing the process	142

Section 3 Epidemiological methods	143
Introduction	144

7 Types of study	145
-------------------------	------------

Types of evidence and study designs	146
Basic concepts in epidemiological research	148
Interpreting associations	150
Confounding	154
Association or causation?	156
The nature of causality	160
Time trend and geographical (ecological) studies	162
Ecological studies: examples	164
Surveys and cross-sectional studies	166
Cross-sectional studies: examples	170
Case-control studies	172
Case-control studies: examples	176
Cohort studies	178
Cohort studies: examples	184
Intervention studies and clinical trials	186
Clinical trials: examples	190
Clinical trial phases	192
Choosing the right type of study	194

8 Sources of data	197
--------------------------	------------

Introduction: good quality data	198
Routine data	202
Clinical uses of routine data	206

Death certification 210
Referral to the coroner 214
Infectious disease notification 215
Cancer registration 216

9 Statistical concepts 217

Introduction 218
Data and variables 220
Summarizing sample data 222
Measures of central location 224
Measures of dispersion 226
Sampling variability 228
Probability distributions 230
Confidence intervals 232
Hypothesis tests 234
Statistical or clinical significance 238
Sample size and power calculations 240
When to consult a statistician 242

10 Statistical techniques in clinical medicine 245

Independent t-test 246
Paired t-tests 248
Confidence intervals for a proportion 250
Normal test for difference in proportions 252
Chi-squared test for association 254
Parametric and non-parametric tests 256
Mann–Whitney U test 257
Wilcoxon's signed-rank test 258
Linear regression 260
Correlation coefficients 262
T-tests for regression coefficients 264
Multiple regression 266
Analysis of variance 268
Logistic regression 272
Measuring survival 274
Kaplan–Meier product limit estimator 276
Log-rank test 278

Cox proportional hazards model 279
 Receiver operating characteristic curves 280

Section 4 Epidemiology of common diseases 283

Introduction 284

11 Global burden of disease 285

Terminology 286
 Global burden of non-communicable disease 288
 Burden of non-communicable disease in the UK 292
 Global burden of communicable disease 294
 Burden of communicable disease in the UK 296

12 Epidemiology of diseases 297

Arthritis 298
 Asthma 300
 Bladder cancer 302
 Brain and CNS cancer 304
 Breast cancer 306
 Cardiovascular disease 308
 Cerebrovascular disease 310
 Cervix cancer 312
 Chronic obstructive pulmonary disease 314
 Cirrhosis of the liver 316
 Colorectal cancer 318
 Coronary heart disease 320
 Dementia 322
 Depression 324
 Diabetes 326
 Emerging infectious disease 328
 Gastroenteritis 330
 Healthcare associated infections 332
 High blood pressure and hypertension 334
 HIV/AIDS 336
 Influenza 338
 Kidney cancer 340
 Leukaemia 342

xvi DETAILED CONTENTS

Liver cancer 344
Lung cancer 346
Malaria 348
Malignant melanoma 350
Measles 352
Meningococcal disease 354
Neglected tropical diseases 356
Non-Hodgkin lymphoma 358
Oesophageal cancer 360
Pancreatic cancer 362
Peptic ulcer disease 364
Prostate cancer 366
Road traffic accidents 368
Self-inflicted injuries 370
Sexually transmitted infections 372
Stomach cancer 374
Tuberculosis 376
Viral hepatitis 380

Index 382
