Contributors	xv
Symbols and abbreviations	xvi
<hr/>	
1 Clinical approach	1
The consultation	2
What, where, and when	4
History taking	6
Examination	8
Higher cognitive function	13
Cranial nerves	16
Peripheral nervous system	25
Neonatal neurological examination	41
Real world examination sequences	45
Synthesis	49
<hr/>	
2 Neurodiagnostic tools	51
Principles of investigation	52
Principles of neuroradiology	54
Neuroradiological anatomy	64
Brainstem anatomy	69
Principles of neurophysiology	70
Peripheral neurophysiological tests	76
Neurophysiological testing of central sensory pathways	82
Specialist investigations	85
Practical procedures	94
Neuropsychological testing	99
<hr/>	
3 Signs and symptoms	103
Agitation and confusion	104
Back pain	106
Behaviour disorders	107
Developmental impairment	109
Exercise limitation and muscle pain	117
Eye movement abnormalities	119

xii DETAILED CONTENTS

Facial movement abnormalities 126
Facial sensation abnormalities 130
The floppy infant 132
Foot deformities 135
Funny turns: episodic events 136
Funny turns: likely epilepsy? 141
Gait abnormalities 144
Head shape abnormalities 146
Head size abnormalities 148
Headache 151
Hearing loss 155
Incontinence 157
Movement abnormalities 159
Magnetic resonance imaging and brain development 163
Unexpected findings on magnetic resonance imaging 167
White matter abnormalities on magnetic resonance imaging 170
Numbness, pain, tingling, and sensory disturbance 174
Peripheral weakness 176
Psychomotor regression 179
School failure 186
Sleep disturbance 188
Speech difficulties 192
Swallowing and feeding problems 194
Toe walking 196
Unsteadiness and falls 197
Visual disturbances 200

4 Specific conditions

209

Acquired brain injury 210
Acquired spinal cord injury 215
Autoimmune disease of the central nervous system 218
'Autoinflammatory' conditions 223
Autoimmune encephalitides 224
Cerebral palsies 227
Care of the disabled child 240
Feeding 248
Communication 251

Special senses	252
Respiratory disease in neurodisability	254
Demyelinating disease	257
Epilepsy	262
Investigating epilepsy	275
Am I missing an underlying cause?	280
Treatment of epilepsy	286
Epilepsy and daily life	298
Non-epileptic paroxysmal phenomena	304
Functional illness	311
Headache	317
Hydrocephalus	324
Spina bifida and related disorders	329
Idiopathic ('benign') intracranial hypertension	334
Infection of the central nervous system	336
Congenital infection	355
Late-onset metabolic disease	365
Mitochondrial disease	369
Movement disorders	375
Neuromuscular conditions: introduction	390
Neuropathies	392
Disorders of muscle	399
Anterior horn cell disease	410
Myasthenic syndromes	411
Management of neuromuscular disease	416
Neurocutaneous syndromes	418
Neurodegenerative conditions	425
Neurotransmitter disorders	435
Sleep disorders	439
Stroke	446
Cerebral haemorrhage	452
Tumours of the central venous system	454
Vitamin-responsive conditions	462

5 Consultation with other services**469**

General principles	470
Cardiology consultations	471

xiv DETAILED CONTENTS

Endocrinology consultations 474
Gastroenterology consultations 476
Neonatal neurology 480
Neonatal encephalopathy 487
Neurosurgical consultations 500
Oncology consultations 502
PICU consultations 507
Psychiatry consultations 517
Neuropsychiatric liaison work 520
Renal consultations 523
Respiratory consultations 526
Rheumatology consultations 531

6 Emergencies 533

Acute agitation 534
Emergency management of coma 536
Traumatic coma 541
Status epilepticus 544
Status dystonicus 551
Sudden onset visual loss 558
The child who suddenly stops walking 559
Acute ataxia 572

7 Pharmacopoeia 573

Pharmacopoeia: A–Z 574
Acute sedation protocols 619
Interactions of anti-epileptic drugs 619

Index 621
