

# Contents

*Preface . . . . iii*  
*Contributors . . . . vii*

## **Part I: GENETICS**

- 1. Alzheimer's Disease: A Complex Paradigm . . . . . 1**  
*Dimitrios Avramopoulos*
- 2. Gene-Mapping Studies for Schizophrenia: How Useful Are They for the Clinician? . . . . . 35**  
*Konasale M. Prasad and Vishwajit L. Nimgaonkar*
- 3. Rare Genes of Major Effect in Neuropsychiatric Diseases . . . . . 55**  
*Ben Pickard, David Porteous, Douglas Blackwood, and Walter Muir*

## **Part II: CANDIDATE GENES AND MODELS**

- 4. Neurotransmission . . . . . 81**  
*Kenji Hashimoto and Eiji Hattori*
- 5. Molecular Genetic Study of Schizophrenia Based on Neurodevelopmental Hypothesis . . . . . 101**  
*Masashi Ikeda, Shinichiro Taya, Kozo Kaibuchi, Nakao Iwata, and Norio Ozaki*
- 6. Model Organisms and Neurogenetics . . . . . 117**  
*David E. Krantz and George R. Jackson*

<b>7. Toward a Unified Model of Neurogenetics</b> .....	<b>135</b>
<i>Stephanie Tankou and Akira Sawa</i>	
<b>Part III: TRANSLATION OF BASIC SCIENCE INTO CLINICAL APPLICATIONS</b>	
<b>8. Clinical Endophenotypes: Implications for Genetic and Clinical Research</b> .....	<b>153</b>
<i>Michael A. Escamilla and David C. Glahn</i>	
<b>9. Pharmacogenetics and Pharmacogenomics in Psychiatry: Clinical Applications</b> .....	<b>173</b>
<i>Maria J. Arranz, Robert W. Kerwin, and Janet C. Munro</i>	
<b>10. Translational Research in Psychiatric Diseases</b> .....	<b>195</b>
<i>Melvin G. McInnis</i>	
<i>Index . . . .</i>	<i>211</i>
