PART 1 – CONCEPTS AND PRINCIPLES

1. Changing priorities for nutrition education	3
Identification of the essential nutrients	3
Adequacy: the traditional priority in nutrition	5
The current priority: diet as a means to health promotion or disease prevention	7
Is intervention to induce dietary change justified?	16
Effecting dietary change	23
Concluding remarks	29
2. Food selection	30
Introduction and aims of the chapter	30
The biological model of food	31
Dietary and cultural prejudice	32
Food classification systems	33
Non-nutritional uses of food	38
The hierarchy of human needs	39
A model of food selection: the 'hierarchy of availabilities' model	41
Physical availability	42
Economic availability	43
Cultural availability	56
'Gatekeeper' limitations on availability	62
3. Methods of nutritional assessment and surveillance	64
Introduction and aims of the chapter	64
Strategies for nutritional assessment	64
Measurement of food intake	65
Tables of food composition	72
Dietary standards and nutrient requirements	75
Clinical signs for the assessment of nutritional status	85
Anthropometric assessment in adults	86
Anthropometric assessment in children	92
Estimating fatness in animals	94
Biochemical assessment of nutritional status	95
Measurement of energy expenditure and metabolic rate	98
4. Methods to establish links between diet and chronic disease	102
Introduction and aims of the chapter	102
Strategic approaches: observational versus experimental	102
Features and problems of epidemiological methods	104
Cross-cultural comparisons	107

Time trends	110
Migration studies	112
Cohort studies	112
Case-control studies	115
Cross-sectional studies	117
'Experiments' of nature	118
Animal experiments	118
Human experimental studies	121
In-vitro studies	132
Scientific honesty	133
5. Dietary guidelines and recommendations	134
The range of 'expert reports' and their consistency	134
Variations in the presentation of guidelines and recommendations	136
'Food' recommendations	137
Energy and body weight	139
Recommendations for fats, carbohydrates, protein and salt	140
Alcohol	143
How current UK diets compare with 'ideal' intakes	146
Other nutrients	147
Willingness to change	147
Some barriers to dietary change	149
Aids to food selection	150
Concluding remarks	154
6. Cellular energetics	156
Introduction and aims of the chapter	156
Overview of metabolism	156
Metabolism of glucose and the monosaccharides	158
Metabolism of fatty acids and glycerol	160
Metabolism of amino acids	161
The pentose phosphate pathway	161
Overview of macronutrient handling in the gut	162
PART 2 – ENERGY, ENERGY BALANCE AND OBESITY	
7. Introduction to energy aspects of nutrition	167
Sources of energy	167
Units of energy	167
How energy requirements are estimated	168
Variation in average energy requirements: general trends	170
Energy content of foods	171
Sources of dietary energy by nutrient	172
Energy density	174
Nutrient density	176
Sources of dietary energy by food groups	177
Starvation	178
Eating disorders	182
Cancer cachexia	185

8. Energy balance and its regulation	187
The concept of energy balance	187
Physiological regulation of energy balance	188
The 'set point' theory	189
Is energy expenditure regulated?	189
External influences on food intake	192
Control of energy intake	192
The leptin story	198
9. Obesity	202
Defining obesity	202
Prevalence of obesity	203
Consequences of obesity	211
The metabolic syndrome or 'syndrome X'	219
Causes of obesity	219
Prevention and treatment of obesity in populations	229
Obesity treatment in individuals	232
'Aggressive' treatments for obesity	237

PART 3 – THE NUTRIENTS

10. Carbohydrates	245
Introduction	245
Nature and classification of carbohydrates	246
Dietary sources of carbohydrates	247
Sugars	248
Artificial sweeteners	250
Diet and dental health	252
Starches	255
Non-starch polysaccharide	257
Resistant starch	260
The glycaemic index	261
Dietary factors in the aetiology of bowel cancer	262
Dietary factors in heart disease	266
11. Protein and amino acids	268
Introduction	268
Chemistry and digestion	268
Intakes, dietary standards and food sources	270
Nitrogen balance	271
Protein quality	274
The significance of protein in human nutrition	278
Concluding remarks	284
12. Fats	285
Nature of dietary fat	285
Types of fatty acid	287
Sources of fat in the human diet	291
Roles of fat in the diet	294

Blood lipoproteins	300
Digestion, absorption and transport of dietary lipids	301
Transport of endogenously produced lipids	303
The diet–heart hypothesis	304
Fish oils	317
Other natural oils used as supplements	322
13. The micronutrients	324
Scope of this chapter	324
Overview of dietary supplements	325
Food fortification	329
Assessment of the micronutrient adequacy of British adults	330
Anti-oxidants and the oxidant theory of disease	335
Do high anti-oxidant intakes prevent heart disease, cancer and other chronic diseases?	341
Use of substances other than essential nutrients as dietary supplements	346
14. The vitamins	357
General concepts and principles	357
Vitamin A (retinol)	361
Vitamin D (cholecalciferol)	365
Vitamin E (α -tocopherol)	371
Vitamin K (phylloquinone)	372
Thiamin (vitamin B ₁)	374
Riboflavin (vitamin B ₂)	376
Niacin (vitamin B ₃)	377
Vitamin B ₆ (pyridoxine)	380
Vitamin B ₁₂ (cobalamins)	381
Folate or folic acid (vitamin B ₉)	383
Biotin	389
Pantothenic acid	389
Vitamin C (ascorbic acid)	390
15. The minerals	393
Introduction	393
Chromium	394
Copper	395
Fluoride	396
Magnesium	396
Manganese	397
Molybdenum	398
Phosphorus	398
Potassium	398
Selenium	399
Zinc	400
Iodine and iodine-deficiency diseases	402
Iron and iron-deficiency anaemia	405
Calcium storage and uptake	410
Calcium and bone health	414
Sodium and disease	421
Review of evidence for a salt–hypertension link	427

PART 4 – VARIATION IN NUTRITIONAL REQUIREMENTS AND PRIORITIES

16. Nutrition and the human lifecycle	435
Introduction	435
Nutritional aspects of pregnancy	437
Lactation	448
Infancy	449
Childhood and adolescence	462
The elderly	469
17. Nutrition as treatment	484
Diet as a complete therapy	484
Diet as a specific component of therapy	488
Malnutrition in hospital patients	496
18. Some other groups and situations	507
Vegetarianism	507
Racial minorities	513
Nutrition and physical activity	519

PART 5 – THE SAFETY AND QUALITY OF FOOD

19. The safety and quality of food	533
Aims of the chapter	533
Consumer protection	533
Food poisoning and the microbiological safety of food	540
Bovine spongiform encephalopathy	554
Food processing	560
The chemical safety of food	564
Functional foods	573
<i>Index</i>	584
