

Contents

*This report is the collective work of all the members of the Task Force.
Authors of the final draft of each chapter are given below.*

Foreword	xv
Terms of Reference	xvi
Task Force Membership	xvii
1 Introduction to Early Life and Later Disease	1
<i>Dr Siân Robinson</i>	
1.1 Environmental influences on development	1
1.1.1 Nutrition and the early environment	1
1.1.2 Variations in growth and development	2
1.2 Links between early life and adult disease	3
1.2.1 Animal studies	3
1.2.2 Evidence from human populations	3
1.2.3 The interaction of fetal and postnatal experience and adult disease	5
1.2.4 Vulnerability to stressors acting in adult life	6
1.3 Biological mechanisms	7
1.3.1 Fetal programming	7
1.3.2 Developmental plasticity	8
1.4 Nutrition of mothers and children	8
1.4.1 Observational studies of maternal diet	9
1.4.2 Supplementation studies	9
1.4.3 Maternal body composition	10
1.4.4 Postnatal nutrition	10
1.5 Nutrition of young women today	11
1.6 Key points	11
1.7 Key references	12
2 Normal Growth and Development	13
<i>Professor J. Harry McArdle, Dr Laura A. Wyness and Dr Lorraine Gambling</i>	
2.1 Introduction	13
2.2 Prenatal development	13

2.2.1	Embryonic period	13
2.2.2	The placenta	16
2.3	Embryo development	16
2.4	Fetal development	16
2.4.1	Normal fetal growth	16
2.4.2	Vulnerable periods: 'critical windows'	17
2.4.3	Mobilisation of maternal stores to protect the fetus	17
2.4.4	Placental glucose transport	17
2.5	Fetal development overview	18
2.5.1	The heart	18
2.5.2	Brain development	18
2.5.3	The lungs	18
2.5.4	Bone	19
2.5.5	Muscle	20
2.5.6	The liver	20
2.5.7	The pancreas	20
2.5.8	The kidneys	21
2.5.9	Haematopoietic tissue	21
2.5.10	Adipose tissue	21
2.5.11	Sex hormone development	21
2.5.12	Immune system development	22
2.6	Birthweight	22
2.7	Postnatal growth and development	24
2.8	Growth monitoring (growth charts)	24
2.9	Secular growth trends	25
2.9.1	Secular change in birthweight	25
2.9.2	Secular change in height	25
2.10	Canalisation, catch-up and catch-down growth	25
2.11	Key points	26
2.12	Recommendations for future research	27
2.13	Key references	27
3	Maternal Nutrition and Infant Feeding: Current Practice and Recommendations	28
	<i>Dr Alison M. Lennox, Professor Judith L. Buttriss and Helena J. Gibson-Moore</i>	
3.1	Introduction	28
3.2	Characteristics of pregnant women in the UK	28
3.2.1	Changing age profile of mothers	28
3.2.2	Birth spacing	31
3.2.3	Ethnic minority groups	32
3.3	Current practice and recommendations: pre-pregnancy	32
3.3.1	The importance of pre-pregnancy nutrient status and weight	32
3.3.2	Recommendations for pre-pregnancy	33
3.3.3	Current dietary practices among women prior to pregnancy	34
3.4	Current practice and recommendations: during pregnancy	35
3.4.1	Recommendations for pregnancy	35
3.4.2	Current practice during pregnancy	39
3.5	Current practice and recommendations: lactation	41
3.5.1	Recommendations for lactation	41
3.5.2	Current practice during lactation	41
3.6	Infant feeding: issues relating to evidence base	42

3.7	Current practice and recommendations: breastfeeding	43
3.7.1	Benefits of breastfeeding	43
3.7.2	Recommendations for breastfeeding: historical perspective and evidence base	43
3.7.3	Breastfeeding: current practice	45
3.8	Current practice and recommendations: formula feeding	50
3.8.1	Composition of infant formulas	50
3.8.2	Feeding infant formula	52
3.8.3	Formula feeding: current practice	53
3.9	Current practice and recommendations: weaning/complementary feeding	53
3.9.1	Recommendations: timing of introduction of complementary foods	53
3.9.2	Current practice of timing of introduction of complementary foods	55
3.9.3	Development of taste preferences and the importance of texture	58
3.9.4	Baby-led weaning	59
3.9.5	Recommendations: specific food types	60
3.9.6	Recommendations: important nutrients to include in the weaning diet	61
3.9.7	Current practice: types of food/drink introduced	62
3.9.8	Vegetarian diets	65
3.9.9	Vegan diets	66
3.9.10	Foods to avoid during introduction of solids	66
3.9.11	Current practice: foods avoided during introduction of solids	66
3.10	Allergy	67
3.10.1	Development of allergies	67
3.10.2	Peanut allergy	67
3.10.3	Coeliac disease	67
3.10.4	Cows' milk protein allergy	68
3.11	Conclusions	68
3.12	Key points	69
3.13	Recommendations for future research	70
3.14	Key references	70
	Appendix 3.1: Historical perspective on breastfeeding and artificial feeding	71
	Breastfeeding	71
	Artificial infant formula	73
4	Mechanisms and Pathways of Critical Windows of Development	75
	<i>Professor Harry J. McArdle and Dr Lorraine Gambling</i>	
4.1	Introduction	75
4.2	Embryo stages	75
4.3	Development of placenta	75
4.4	Nutritional programming: the effect of nutrition on fetal development	77
4.4.1	Severe effects of micronutrient deprivation in pregnancy	77
4.4.2	The effect of famine on fetal development	78
4.4.3	Experimental models for the study of poor nutrition on fetal development	80
4.5	Potential mechanisms of nutritional programming	80
4.5.1	Disruption of organ development	81
4.5.2	Disruption of the endocrine environment	81
4.5.3	Epigenetics	83
4.5.4	Telomere length	84
4.5.5	The gatekeeper hypothesis	84
4.6	Conclusions	84
4.7	Key points	85

4.8	Recommendations for future research	85
4.9	Key references	85
5	Perinatal Effects of Sex Hormones in Programming of Susceptibility to Disease	86
	<i>Professor Richard M. Sharpe</i>	
5.1	Introduction	86
5.2	Timing of masculinisation and its body-wide effects	86
5.3	Disorders of masculinisation	87
5.4	Male–female differences in disease risk: the potential role of perinatal androgens	88
5.5	Fetal growth, susceptibility to intrauterine growth restriction and its long-term consequences, including timing of puberty	88
5.6	Growth hormone–insulin-like growth factor-I axis	90
5.7	Brain and behavioural effects	90
5.8	Sex differences in eating disorders, neuronal mechanisms and adipose tissue distribution	90
	5.8.1 Eating disorders	90
	5.8.2 Kisspeptin system	91
	5.8.3 Dietary preferences	91
	5.8.4 Body fat distribution	91
5.9	Cardiovascular disease/hypertension	92
5.10	Kidney disease/hypertension	92
5.11	The immune system	93
5.12	Lung development and disease risk	93
5.13	Effects of maternal diet/obesity and infant feeding choices	93
5.14	‘Fetal programming’ and epigenetic mechanisms	95
5.15	Conclusions	95
5.16	Key points	95
5.17	Recommendations for future research	96
5.18	Key references	96
6	Neurological Development	97
	<i>Professor Julian G. Mercer</i>	
6.1	Introduction	97
	6.1.1 The vulnerability of the developing brain	97
	6.1.2 Mechanistic studies in animal models	97
	6.1.3 Levels of nutritional effect	98
	6.1.4 Environments	98
6.2	The developing brain	99
	6.2.1 Timing	99
	6.2.2 Human brain development	99
	6.2.3 Pregnancy outcome	100
6.3	Brain energy balance circuits and peripheral feedback signals	101
	6.3.1 Background	101
	6.3.2 Structures and development	101
	6.3.3 Hormonal feedback	104
6.4	Nutritional influences on the developing brain	106
	6.4.1 Risk factors	106
	6.4.2 Global over-nutrition	107
	6.4.3 Global under-nutrition	108
	6.4.4 Micronutrient deficiency	109
	6.4.5 Long-chain fatty acid deficiency	110

6.5	Programming mechanisms	110
6.5.1	Glucocorticoids	110
6.5.2	Epigenetics	111
6.6	Nutritional interventions	112
6.7	Conclusions	113
6.8	Key points	114
6.9	Recommendations for future research	115
6.10	Key references	115
7	Establishing of Gut Microbiota and Bacterial Colonisation of the Gut in Early Life	116
	<i>Dr Anne L. McCartney</i>	
7.1	Introduction	116
7.1.1	Investigating gut microbiota	116
7.1.2	Human gut microbiota	117
7.2	Acquisition of the gut microbiota	117
7.3	Factors affecting the infant gut microbiota (acquisition and development)	118
7.3.1	Gestational age	118
7.3.2	Mode of delivery	119
7.3.3	Host genetics	119
7.3.4	Geography and/or lifestyles	119
7.3.5	Diet	120
7.4	The gut microbiota of exclusively milk-fed infants	120
7.5	The effects of weaning on the infant gut microbiota	123
7.6	Potential long-term effects: implications for obesity	128
7.7	Conclusions	128
7.8	Key points	128
7.9	Recommendations for future research	129
7.10	Key references	129
8	Nutrition and Development: Obesity	130
	<i>Professor Lucilla Poston</i>	
8.1	Introduction	130
8.2	Inadequate <i>in utero</i> nutrition: a risk factor for obesity in later life?	130
8.2.1	Evidence from human population studies	130
8.2.2	Early postnatal 'catch-up' growth and obesity risk	131
8.2.3	Exposure to famine during gestation	132
8.3	Breastfeeding and risk of obesity in later life	132
8.4	Maternal diabetes and obesity: early life determinants of offspring obesity?	132
8.4.1	Association of higher birthweight with offspring adiposity	133
8.4.2	Maternal diabetes	133
8.4.3	Maternal obesity: a determinant of offspring obesity?	134
8.4.4	Gestational weight gain and offspring adiposity	135
8.5	Interventions to reduce offspring obesity?	135
8.5.1	Reducing low birthweight	135
8.5.2	Reducing infant postnatal weight gain	135
8.5.3	Formula feed composition	136
8.6	Interventions in pregnant diabetic women	136
8.7	Interventions in obese pregnant women	137
8.7.1	Other modifiable factors which may contribute to offspring obesity	137
8.8	Mechanisms underlying the early life origins of obesity; role of animal studies	138
8.8.1	Maternal under-nutrition	138
8.8.2	Maternal diabetes	138

8.8.3	Maternal obesity	139
8.8.4	Neonatal overfeeding	139
8.9	A central role for disturbance in pathways of appetite regulation	139
8.9.1	Fetal and neonatal hyperinsulinaemia	139
8.9.2	Fetal and neonatal hyperleptinaemia	140
8.9.3	Maternal obesity	140
8.9.4	Cellular pathways of energy metabolism	140
8.9.5	Mechanisms underlying persistent modification of gene expression	140
8.10	Conclusions	141
8.11	Key points	141
8.12	Recommendations for future research	142
8.13	Key references	142
9	Nutrition and Development: Type 2 Diabetes	143
	<i>Dr Susan E. Ozanne</i>	
9.1	Introduction	143
9.2	Relationships between birthweight and type 2 diabetes	144
9.2.1	Low birthweight and type 2 diabetes	144
9.2.2	High birthweight and type 2 diabetes	144
9.3	Postnatal growth	144
9.4	Evidence for the role of early nutrition in humans influencing type 2 diabetes risk	145
9.4.1	During pregnancy	145
9.4.2	During lactation	145
9.5	Evidence for the role of early nutrition in animal models influencing type 2 diabetes risk	145
9.5.1	Models of under-nutrition	145
9.5.2	Models of over-nutrition	146
9.5.3	Underlying mechanisms	147
9.6	Conclusions	148
9.7	Key points	148
9.8	Recommendations for future research	149
9.9	Key references	149
10	Nutrition and Development: Cardiovascular Disease	150
	<i>Dr Paul D. Taylor and Professor Thomas A. B. Sanders</i>	
10.1	Introduction	150
10.2	Evidence-based on clinical endpoints	151
10.3	Postnatal growth	152
10.4	Programming of atherosclerosis	153
10.5	Programming of blood pressure	157
10.6	Animal models of nutritional manipulation in early life	158
10.6.1	Mechanisms of hypertension in animal models of under-nutrition	159
10.6.2	Cardiovascular dysfunction in animal models of over-nutrition	160
10.6.3	Developmental programming of cardiac function	161
10.7	Conclusions	162
10.8	Key points	162
10.9	Recommendations for future research	162
10.10	Key references	163
11	Nutrition and Development: Cancer	164
	<i>Professor Paul Haggarty and Professor Steven Darryll Heys</i>	
11.1	Cancer incidence and trends	164
11.2	Cancer biology	165

11.3	Evidence linking early nutrition to cancer	166
11.3.1	Interventions	166
11.3.2	Breast versus bottle feeding	167
11.3.3	Famine	167
11.3.4	Birth anthropometry	167
11.3.5	Childhood anthropometry and growth	168
11.3.6	Adult stature and body composition	168
11.4	Possible mechanisms linking early nutrition to cancer risk	168
11.4.1	Genotype	168
11.4.2	Epigenotype	170
11.4.3	Phenotype	172
11.5	Conclusions	174
11.6	Key points	175
11.7	Recommendations for future research	175
11.8	Key references	176
12	Nutrition and Development: Bone Health	177
	<i>Dr Vicki Quincey, Professor Elaine Dennison, Professor Cyrus Cooper and Dr Nicholas C. Harvey</i>	
12.1	Early life origins of osteoporosis	177
12.1.1	Osteoporosis epidemiology	177
12.1.2	Normal development of bone size and volumetric density	177
12.1.3	Tracking of growth	178
12.1.4	Peak bone mass and risk of fracture	180
12.1.5	Early influences on bone development	180
12.2	Maternal nutrition in pregnancy	180
12.2.1	The role of maternal vitamin D	180
12.2.2	Vitamin D intervention studies in pregnancy	181
12.2.3	Safety of vitamin D supplementation in pregnancy	182
12.2.4	Calcium nutrition in pregnancy	183
12.2.5	Polyunsaturated fatty acids and bone metabolism	184
12.3	Postnatal calcium and vitamin D nutrition	184
12.3.1	Calcium nutrition in infancy	184
12.3.2	Vitamin D nutrition in infancy	185
12.4	Calcium and vitamin D nutrition in older children	186
12.5	Vitamin D: problems with defining normality	186
12.6	Physical activity and bone health in childhood	188
12.7	Conclusions	189
12.8	Key points	189
12.9	Recommendations for future research	190
12.10	Key references	190
13	Nutrition and Development: Asthma and Allergic Disease	191
	<i>Professor Graham S. Devereux and Dr Nanda Prabhu</i>	
13.1	Introduction	191
13.2	Pathogenesis	191
13.3	Increasing prevalence of asthma and allergic disease	193
13.4	Impact of asthma and allergic disease	193

13.5	Importance of antenatal and early life influences on asthma and allergic disease	194
13.5.1	Birth anthropometry	194
13.5.2	Neonatal lung function and asthma	194
13.5.3	Neonatal immunology	195
13.6	Maternal dietary food allergen intake during pregnancy and breastfeeding	195
13.6.1	Fetal allergen exposure	196
13.6.2	Cord blood mononuclear cell responses and maternal exposure to allergen	196
13.6.3	Cord blood mononuclear cell responses and subsequent allergic disease	197
13.6.4	Observational and intervention studies of maternal diet during pregnancy and lactation	197
13.7	Breastfeeding and childhood atopic dermatitis and asthma	198
13.8	Infant dietary food allergen intake	198
13.9	Early life nutrient intake	199
13.9.1	Antioxidant hypothesis	199
13.9.2	Polyunsaturated fatty acids hypothesis	200
13.9.3	Vitamin D hypotheses	200
13.9.4	Maternal antioxidant status during pregnancy and childhood asthma and allergy	201
13.9.5	Early life polyunsaturated fatty acid status and childhood asthma and allergy	201
13.9.6	Early life vitamin D status and childhood asthma and allergy	202
13.9.7	Early life nutrient intake and childhood asthma and allergic disease	202
13.10	Obesity and childhood asthma and allergic disease	203
13.11	Conclusions	203
13.12	Key points	204
13.13	Recommendations for future research	204
13.14	Key references	205
14	Nutrition and Development: Early Nutrition, Mental Development and Mental Ageing	206
	<i>Professor Marcus Richards, Dr Alan Dangour and Professor Ricardo Uauy</i>	
14.1	The importance of mental development and ageing	206
14.2	Maternal diet during pregnancy	207
14.3	Breastfeeding	209
14.3.1	Breastfeeding and cognitive development	209
14.3.2	Long-term cognitive effects of breastfeeding	210
14.3.3	Breastfeeding and cognitive development: a caveat	211
14.3.4	Infant feeding and the central nervous system	211
14.3.5	Breastfeeding and behavioural development	211
14.3.6	Optimal duration of breastfeeding	212
14.4	Post-weaning diet	212
14.4.1	Dietary patterns at the macro level	213
14.4.2	Iron status in childhood	213
14.4.3	Food intolerance and mental development: additives and preservatives	213
14.5	Conclusions	213
14.6	Key points	214
14.7	Recommendations for future research	215
14.8	Key references	215
15	Putting the Science into Practice: Public Health Implications	216
	<i>Professor Judith L. Buttriss, Sara A. Stanner and Professor Thomas A. B. Sanders</i>	
15.1	Introduction	216
15.1.1	Critical windows	216
15.1.2	Endocrine system development	217

15.1.3	Neurological development	217
15.1.4	Gut flora	218
15.2	Summary of the Task Force's findings for various chronic conditions	218
15.2.1	Obesity	218
15.2.2	Type 2 diabetes	222
15.2.3	Cardiovascular disease	223
15.2.4	Cancer	224
15.2.5	Bone health	225
15.2.6	Allergic disease and asthma	226
15.2.7	Cognitive function/mental health and behaviour	227
15.3	Diet and lifestyle themes relevant to pregnancy and early life	228
15.3.1	Maternal body weight and energy balance	228
15.3.2	Macronutrients	229
15.3.3	Micronutrients	230
15.3.4	Alcohol	239
15.3.5	Caffeine	239
15.4	Diet and lifestyle themes relevant to early feeding and weaning	240
15.4.1	Breastfeeding and use of breast milk substitutes	240
15.4.2	Weaning onto a family diet	240
15.4.3	Catch-up growth and accelerated growth	241
15.5	Vulnerable groups	242
15.5.1	Women with poor diets	242
15.5.2	Pregnant adolescents	242
15.5.3	Ethnic minority groups	243
15.5.4	Lower socioeconomic groups	244
15.5.5	Smokers	244
15.5.6	Obese women	245
15.6	Diet and lifestyle recommendations	245
15.7	Role of health professionals	247
15.8	Recommendations	250
15.8.1	Recommendations to policy makers	250
15.8.2	Recommendations to health professionals and other educators	252
15.8.3	Recommendations to the food industry	254
15.8.4	Recommendations to researchers and funders	254
15.9	Key points	254
15.10	Key references	255
16	Conclusions of the Task Force	256
16.1	Chapter 1	257
16.2	Chapter 2	257
16.3	Chapter 3	258
16.4	Chapter 4	258
16.5	Chapter 5	259
16.6	Chapter 6	259
16.7	Chapter 7	260
16.8	Chapter 8	260
16.9	Chapter 9	260
16.10	Chapter 10	261
16.11	Chapter 11	261
16.12	Chapter 12	261
16.13	Chapter 13	262

16.14	Chapter 14	262
16.15	Chapter 15	263
17	Recommendations of the Task Force	265
17.1	Priorities for future research on current practice in relation to early life development	265
17.2	Priorities for future research on mechanisms and pathways of early life development	265
17.2.1	Normal growth and development	265
17.2.2	Mechanisms and pathways of critical windows of development	266
17.2.3	Perinatal effects of sex hormones in programming of disease susceptibility	266
17.2.4	Cognitive and neurological development	266
17.2.5	Establishing gut microbiota and bacterial colonisation of the gut in early life	266
17.3	Priorities for future research: specific diseases	267
17.3.1	Obesity	267
17.3.2	Diabetes	267
17.3.3	Cardiovascular disease	267
17.3.4	Cancer	267
17.3.5	Bone health	268
17.3.6	Allergic disease and asthma	268
17.3.7	Cognitive function	268
17.4	Recommendations to key stakeholders	268
17.4.1	Recommendations to policy makers	268
17.4.2	Recommendations to health professionals and other educators	270
17.4.3	Recommendations to the food industry	272
18	Nutrition and Development: Answers to Common Questions	273
18.1	Nutrition and development	273
18.2	Developmental programming hypotheses	273
18.3	Normal growth	273
18.4	How development occurs and factors that can affect it	274
18.5	Influences of perinatal sex hormone exposure on programming of disease susceptibility	275
18.6	Cognitive and neurological development	276
18.7	Influences of gut microbiota on programming of disease susceptibility	276
18.8	Obesity	277
18.9	Diabetes	278
18.10	Cardiovascular disease	278
18.11	Cancer	279
18.12	Bone health	280
18.13	Allergic diseases and asthma	281
18.14	Mental health and cognitive behaviour	282
18.15	Dietary and lifestyle advice for early life	282
18.16	Policies relating to early life nutrition and development	286
