Preface	xi
Acknowledgments	xii
<b>1. Introduction to Lifespan Nutrition</b>	<b>1</b>
1.1 The lifespan approach to nutrition	1
1.2 The concept of balance	2
1.2.1 A supply and demand model	2
1.2.2 Overnutrition	2
1.2.3 Undernutrition	4
1.2.3.1 Increased demand	4
1.2.3.2 The metabolic response to trauma	4
1.2.3.3 Compromised supply and deficiency	6
1.2.3.4 Malnutrition	7
1.2.4 Classical balance studies	8
1.2.5 Overall nutritional status	10
1.3 Nutrition requirements change across the lifespan	10
1.4 Assessment of nutritional status	11
1.4.1 Anthropometric measures	12
1.4.2 Estimating dietary intakes	12
1.4.2.1 Indirect measures	12
1.4.2.2 Direct measures	13
1.4.3 Biomarkers of nutritional status	15
1.4.4 Clinical examination	16
1.5 Dietary reference values	16
1.5.1 The UK dietary reference value system	17
1.5.2 Dietary reference values in other countries	19
<b>2. Before Life Begins</b>	<b>23</b>
2.1 Introduction	23
2.2 Nutrition and female fertility	24
2.2.1 Determinants of fertility and infertility	24
2.2.1.1 The endocrine control of female reproduction	24
2.2.1.2 Disordered reproductive cycling	25
2.2.1.3 Polycystic ovary syndrome	25
2.2.1.4 Assisted reproductive technologies	26
2.2.2 Importance of body fat	26
2.2.3 Role of leptin	27
2.2.4 Antioxidant nutrients	28
2.2.5 Caffeine and alcohol	30
2.3 Nutrition and male fertility	32
2.3.1 Determinants of fertility and infertility	32
2.3.2 Obesity	34
2.3.3 Diabetes	34
2.3.4 Alcohol	35

2.3.5	Zinc	35
2.3.6	Antioxidant nutrients	36
2.3.7	Selenium	37
2.3.8	Phytoestrogens and environmental estrogens	37
2.3.8.1	Phthalates	37
2.3.8.2	Phytoestrogens	38
2.3.8.3	Pesticides	38
2.4	Preparation for pregnancy	39
2.4.1	Why prepare for pregnancy?	39
2.4.2	Vitamin A and liver	40
2.4.3	Folic acid and neural tube defects	41
2.4.3.1	Supplementation with folic acid	42
2.4.3.2	Fortification with folic acid	43
<b>3.</b>	<b>Pregnancy</b>	<b>47</b>
3.1	Introduction	47
3.2	Physiological demands of pregnancy	48
3.2.1	Maternal weight gain and body composition changes	49
3.2.2	Blood volume expansion and cardiovascular changes	49
3.2.3	Renal changes	50
3.2.4	Respiratory changes	50
3.2.5	Gastrointestinal changes	51
3.2.6	Metabolic adaptations	51
3.3	Nutrient requirements in pregnancy	52
3.3.1	Energy, protein, and lipids	52
3.3.2	Micronutrients	54
3.3.2.1	Iron	54
3.3.2.2	Calcium and other minerals	55
3.3.2.3	Vitamin D	56
3.4	Diet in relation to pregnancy outcomes	57
3.4.1	Miscarriage and stillbirth	57
3.4.2	Premature labor	58
3.4.2.1	Pre-pregnancy BMI and pregnancy weight gain	58
3.4.2.2	Alcohol and caffeine consumption	59
3.4.2.3	Oral health	60
3.4.3	Hypertensive disorders of pregnancy	60
3.4.3.1	The etiology of PE	60
3.4.3.2	Nutrition-related factors and PE	62
3.4.4	Abnormal labor	62
3.5	Nausea and vomiting of pregnancy (NVP)	63
3.5.1	NVP as a normal physiological process	63
3.5.2	Hyperemesis gravidarum	65
3.6	Cravings and aversions	66
3.6.1	Pica	66
3.7	Gastrointestinal disturbances in pregnancy	67
3.8	High-risk pregnancies	68
3.8.1	Gestational diabetes	68
3.8.2	Multiple pregnancies	69
3.8.3	Fetal alcohol spectrum disorders	71

---

4.	<b>Fetal Nutrition and Disease in Later Life</b>	75
4.1	Introduction	75
4.2	The developmental origins of adult disease	75
4.2.1	The concept of programming	75
4.2.2	Fetal programming and human disease	76
4.3	Evidence linking maternal nutrition to disease in later life	79
4.3.1	Epidemiology	79
4.3.2	Criticisms of the programming hypothesis	81
4.3.3	Experimental studies	82
4.3.3.1	Global undernutrition	83
4.3.3.2	Micronutrients	83
4.3.3.3	Macronutrients	83
4.4	Mechanistic basis of fetal programming	85
4.4.1	Thrifty phenotypes and genotypes	85
4.4.2	Predictive adaptive responses	87
4.4.3	Tissue remodeling	87
4.4.4	Endocrine imbalance	89
4.4.5	Nutrient–gene interactions	90
4.4.6	Epigenetic regulation	92
4.5	Implications of the programming hypothesis	93
4.5.1	Public health interventions	93
4.5.2	Trans-generational transmission of disease risk	93
5.	<b>Lactation and Infant Feeding</b>	99
5.1	Introduction	99
5.2	The physiology of lactation	99
5.2.1	Anatomy of the breast	99
5.2.1.1	The nipple and areola	99
5.2.1.2	The lactiferous ducts	99
5.2.1.3	The lactiferous sinuses	99
5.2.1.4	The alveolar cells	100
5.2.1.5	The rooting reflex	100
5.2.2	Synthesis of milk	101
5.2.2.1	Foremilk and hindmilk	101
5.2.2.2	Time of day	101
5.2.2.3	Course of lactation	102
5.2.2.4	Synthesis of carbohydrates	102
5.2.2.5	Origins of milk fats	102
5.2.2.6	Milk proteins	103
5.2.3	Endocrine control of lactation	104
5.2.3.1	The breast during pregnancy	104
5.2.3.2	Established lactation	104
5.2.3.3	The breast after weaning	105
5.2.4	Maintenance of lactation	105
5.2.5	Nutritional demands of lactation	106
5.3	The advantages of breast-feeding	107
5.3.1	Advantages for the mother	107
5.3.2	Advantages for the infant	109
5.3.3	Recommendation to feed to 6 months	112

5.4	Trends in breast-feeding behavior	112
5.4.1	Reasons why women do not breast-feed	114
5.4.2	Promoting breast-feeding	115
5.5	Situations in which breast-feeding is not advised	117
5.6	Alternatives to breast-feeding	118
5.6.1	Cow's milk formulas	118
5.6.1.1	Milk stages and follow-on milk	119
5.6.2	Preterm formulas	120
5.6.3	Soy formulas	121
5.6.4	Hydrolyzed protein and amino-acid-based formulas	121
5.6.5	Other formulas	121
6.	<b>Nutrition and Childhood</b>	124
6.1	Introduction	124
6.2	Infancy (birth to five)	124
6.2.1	The key developmental milestones	124
6.2.2	Nutrient requirements	126
6.2.2.1	Macronutrients and energy	126
6.2.2.2	Micronutrients	128
6.2.3	Nutrient intakes and infants	129
6.2.4	Transition to an adult pattern of food intake	129
6.2.4.1	Weaning	130
6.2.4.2	Nutrition-related problems	132
6.2.4.3	Barriers to healthy nutrition	134
6.3	Childhood (five to thirteen)	139
6.3.1	Nutrient requirements of the older child	139
6.3.2	School meals and the promotion of healthy eating	139
6.3.3	The importance of breakfast	140
6.4	Obesity in children	141
6.4.1	The rising prevalence of obesity	141
6.4.2	The causes of obesity in childhood	142
6.4.2.1	Physical activity	143
6.4.2.2	Food intake	143
6.4.2.3	Genetic disorders	146
6.4.3	The consequences of childhood obesity	147
6.4.3.1	Immediate health consequences	148
6.4.3.2	Tracking of obesity: consequences for the future	148
6.4.4	Treatment of childhood obesity	150
6.4.5	Prevention of childhood obesity	152
7.	<b>Nutrition and Adolescence</b>	158
7.1	Introduction	158
7.2	Physical development	158
7.2.1	Growth rate	158
7.2.2	Body composition	159
7.2.3	Puberty and sexual maturation	159
7.2.4	Bone growth	163
7.3	Psychosocial development	165

---

7.4	Nutritional requirements in adolescence	166
7.4.1	Macronutrients and energy	166
7.4.2	Micronutrients	167
7.5	Nutritional intakes in adolescence	168
7.5.1	Factors that influence food choice	169
7.5.2	Food consumed out of the home	170
7.5.3	Meal skipping and snacking	171
7.6	Potential problems with nutrition	172
7.6.1	Dieting and weight control	172
7.6.2	The vegetarian teenager	172
7.6.3	Sport and physical activity	173
7.6.4	Eating disorders	174
7.6.4.1	Anorexia nervosa	174
7.6.4.2	Bulimia nervosa	176
7.6.5	The pregnant teenager	176
7.6.6	Alcohol	178
7.6.7	Tobacco smoking	180
7.6.8	Drug abuse	181
8.	<b>The Adult Years</b>	185
8.1	Introduction	185
8.2	Changing needs for nutrients	185
8.3	Guidelines for healthy nutrition	186
8.4	Disease states associated with unhealthy nutrition and lifestyle	189
8.4.1	Obesity	189
8.4.1.1	Classification of overweight and obesity	189
8.4.1.2	Prevalence and trends in obesity	189
8.4.1.3	Causes of obesity in adulthood	190
8.4.1.4	Treatment of obesity	191
8.4.2	Type 2 diabetes	192
8.4.3	The metabolic syndrome	195
8.4.4	Cardiovascular disease	196
8.4.4.1	What is cardiovascular disease?	196
8.4.4.2	Risk factors for cardiovascular disease	199
8.4.4.3	Nutrition-related factors and risk of cardiovascular disease	199
8.4.5	Cancer	207
8.4.5.1	What is cancer?	207
8.4.5.2	Diet is the main determinant of cancer risk	208
8.4.5.3	Nutritional epidemiology and cancer	209
8.4.5.4	Dietary factors that may promote cancer	213
8.4.5.5	Dietary factors that may reduce cancer risk	217
9.	<b>Nutrition, Aging, and the Elderly</b>	227
9.1	Introduction	227
9.2	The aging population	227
9.3	The aging process	228
9.3.1	Impact on physiological systems	228
9.3.2	Mechanisms of cellular senescence	228

9.3.2.1	Oxidative senescence	230
9.3.2.2	The role of p53 activation	231
9.3.2.3	Telomere shortening	231
9.3.2.4	The INK4a/ARF axis	231
9.3.3	Nutritional modulation of the aging process	232
9.3.3.1	Caloric restriction and lifespan	232
9.3.3.2	Fetal programming of lifespan	233
9.3.3.3	Supplementary antioxidants	233
9.4	Nutrient requirements of the elderly	234
9.4.1	Macronutrients and energy	234
9.4.2	Micronutrients	234
9.4.3	Specific guidelines for the elderly	234
9.5	Barriers to healthy nutrition in the elderly	235
9.5.1	Malnutrition and the elderly	235
9.5.2	Poverty	236
9.5.3	Social isolation	237
9.5.4	Education	237
9.5.5	Physical changes	238
9.5.6	Combating malnutrition in the elderly	238
9.6	Common nutrition-related health problems	239
9.6.1	Bone disorders	239
9.6.1.1	Bone mineralization and remodeling	239
9.6.1.2	Osteoporosis pathology and prevalence	241
9.6.1.3	Risk factors for osteoporosis	241
9.6.1.4	Dietary interventions for osteoporosis prevention	242
9.6.1.5	Paget's disease of bone	244
9.6.2	Immunity and infection	244
9.6.3	Digestive tract disorders	245
9.6.3.1	Mouth and esophagus	245
9.6.3.2	Stomach	246
9.6.3.3	Small intestine	246
9.6.3.4	Large intestine	246
9.6.4	Anemia	247
9.6.4.1	Iron deficiency anemia	248
9.6.4.2	Vitamin B12 deficiency	248
9.6.4.3	Folic acid deficiency	249
9.6.4.4	Cognitive impairment and anemia	249
10.	<b>Personalized Nutrition</b>	254
10.1	Introduction	254
10.2	The individual response to variation in food intake	255
10.2.1	Genes may determine food intake	256
10.2.1.1	Regulation of food intake	257
10.2.1.2	Regulation of macronutrient intake	257
10.2.1.3	Regulation of taste	257
10.2.2	Genes may determine nutrient bioavailability and utilization	258
10.2.3	Nutritional regulation of gene expression	258

10.3	Identifying disease risk biomarkers	260
10.3.1	Nutrigenomics	260
10.3.2	Proteomics	261
10.3.3	Metabolomics	263
10.4	Genetic influences on response to nutrients and disease risk	263
10.4.1	Obesity	263
10.4.2	Cardiovascular disease	264
10.4.3	Cancer	265
10.5	Nutrient–gene interactions—a lifespan approach	266
10.6	The future of nutritional advice?	268
	Glossary of Terms	271
	Index	291
